1. How to Download and Install WPDesktop (All-in-One)

* Same steps for all the operating systems.

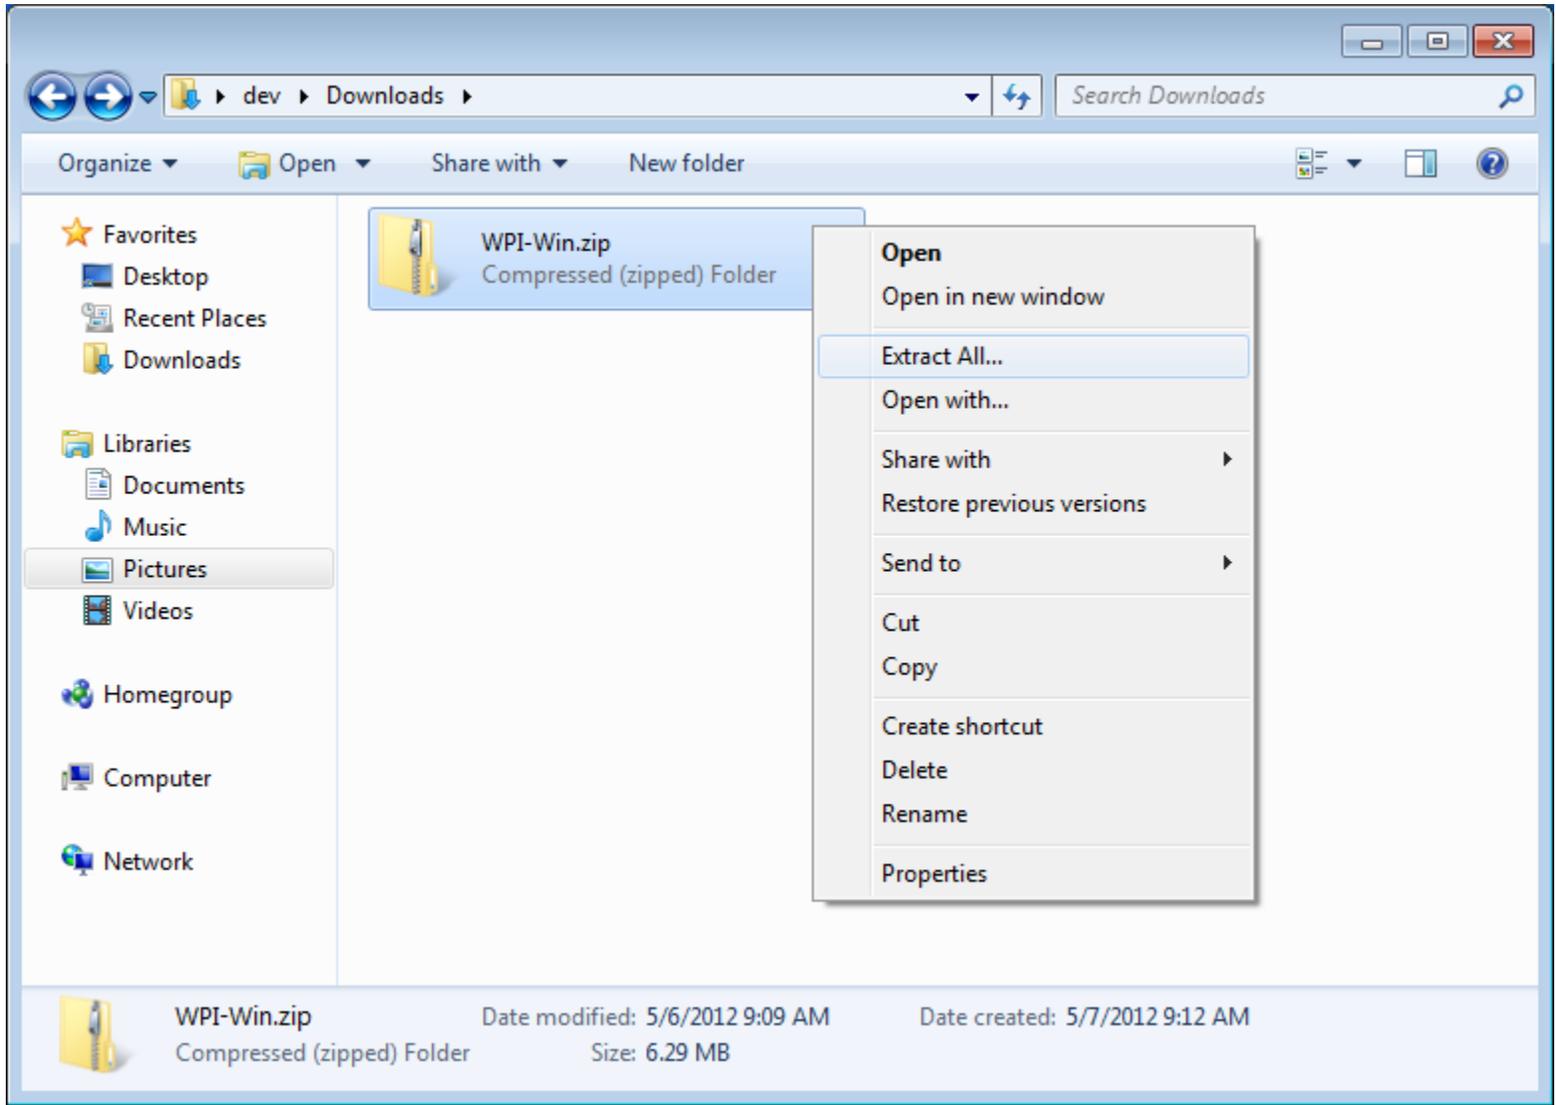

To begin, download the latest version from [Click Here](#)

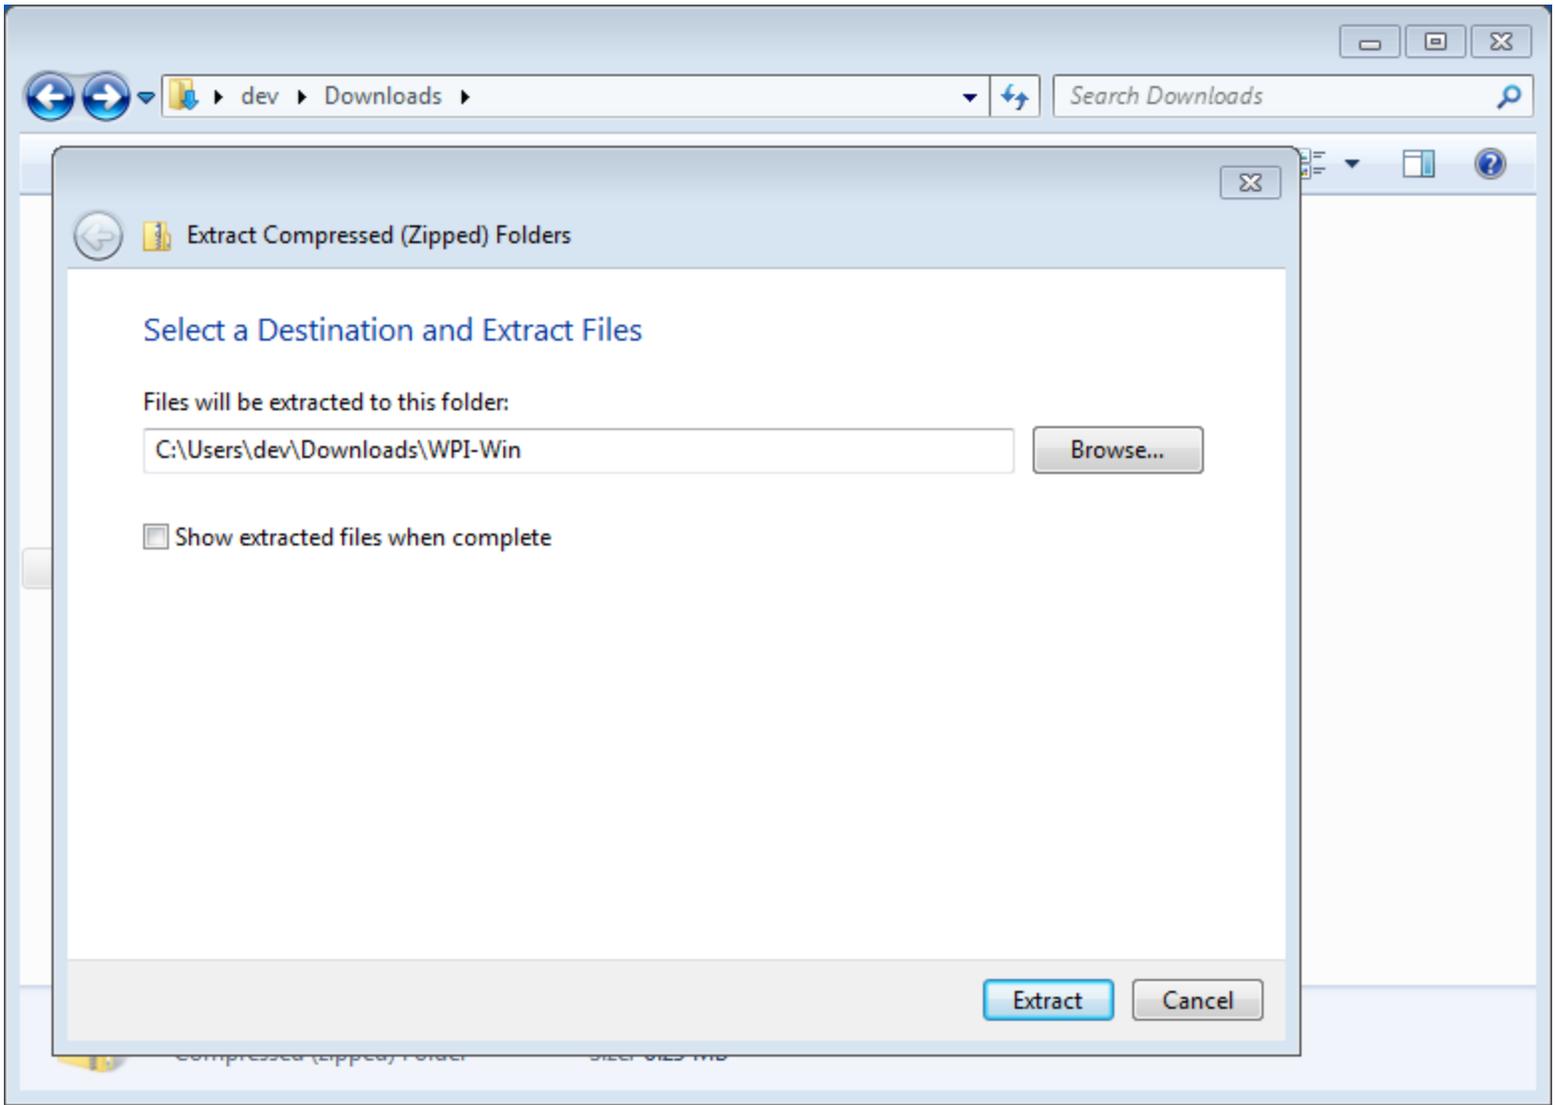

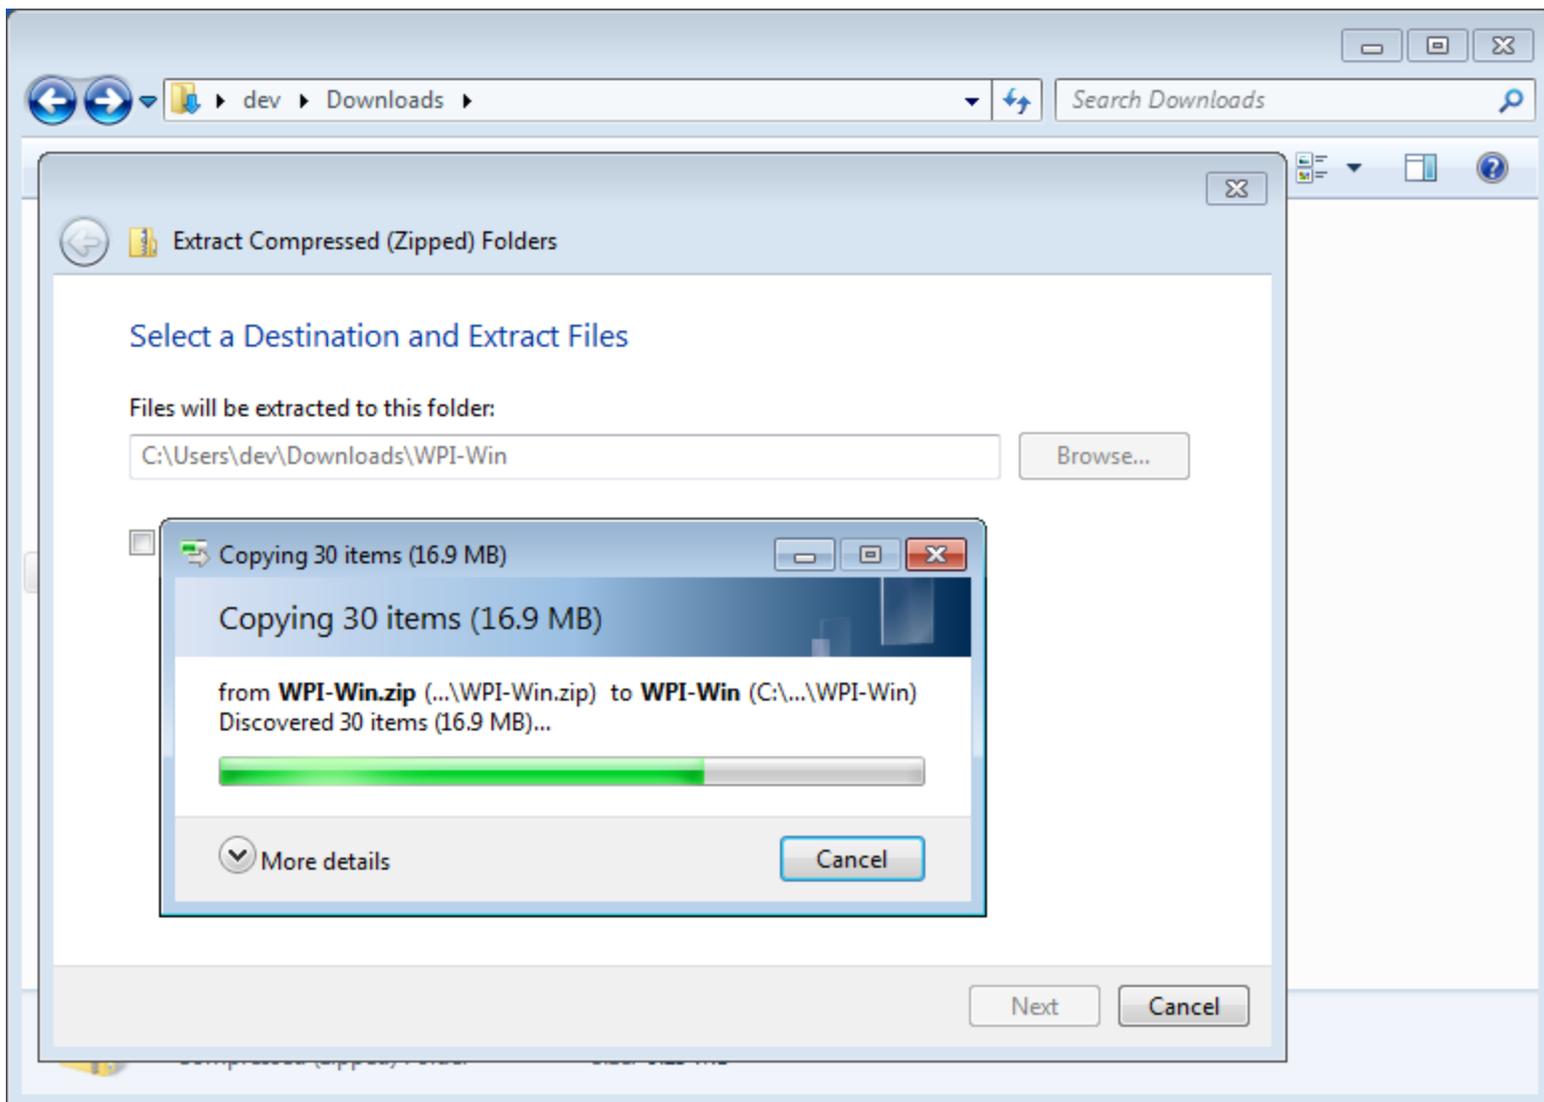

The screenshot shows a web browser window displaying the WPDesktop website. The page title is "Desktop WordPress Blog Installer - Download". The navigation menu includes "Home", "Quick Start Guide", "Download", "Buy Now!", "Support", and "Our Products". The "Download" section is active, showing the "Download 2012 Release 6 (May 11, 2012)" link. Below this, there are three download options: Windows (file size approx. 7MB), Macintosh (Intel and PowerPC), and Linux. The system requirements section is also visible, detailing the necessary hardware and software for each operating system.

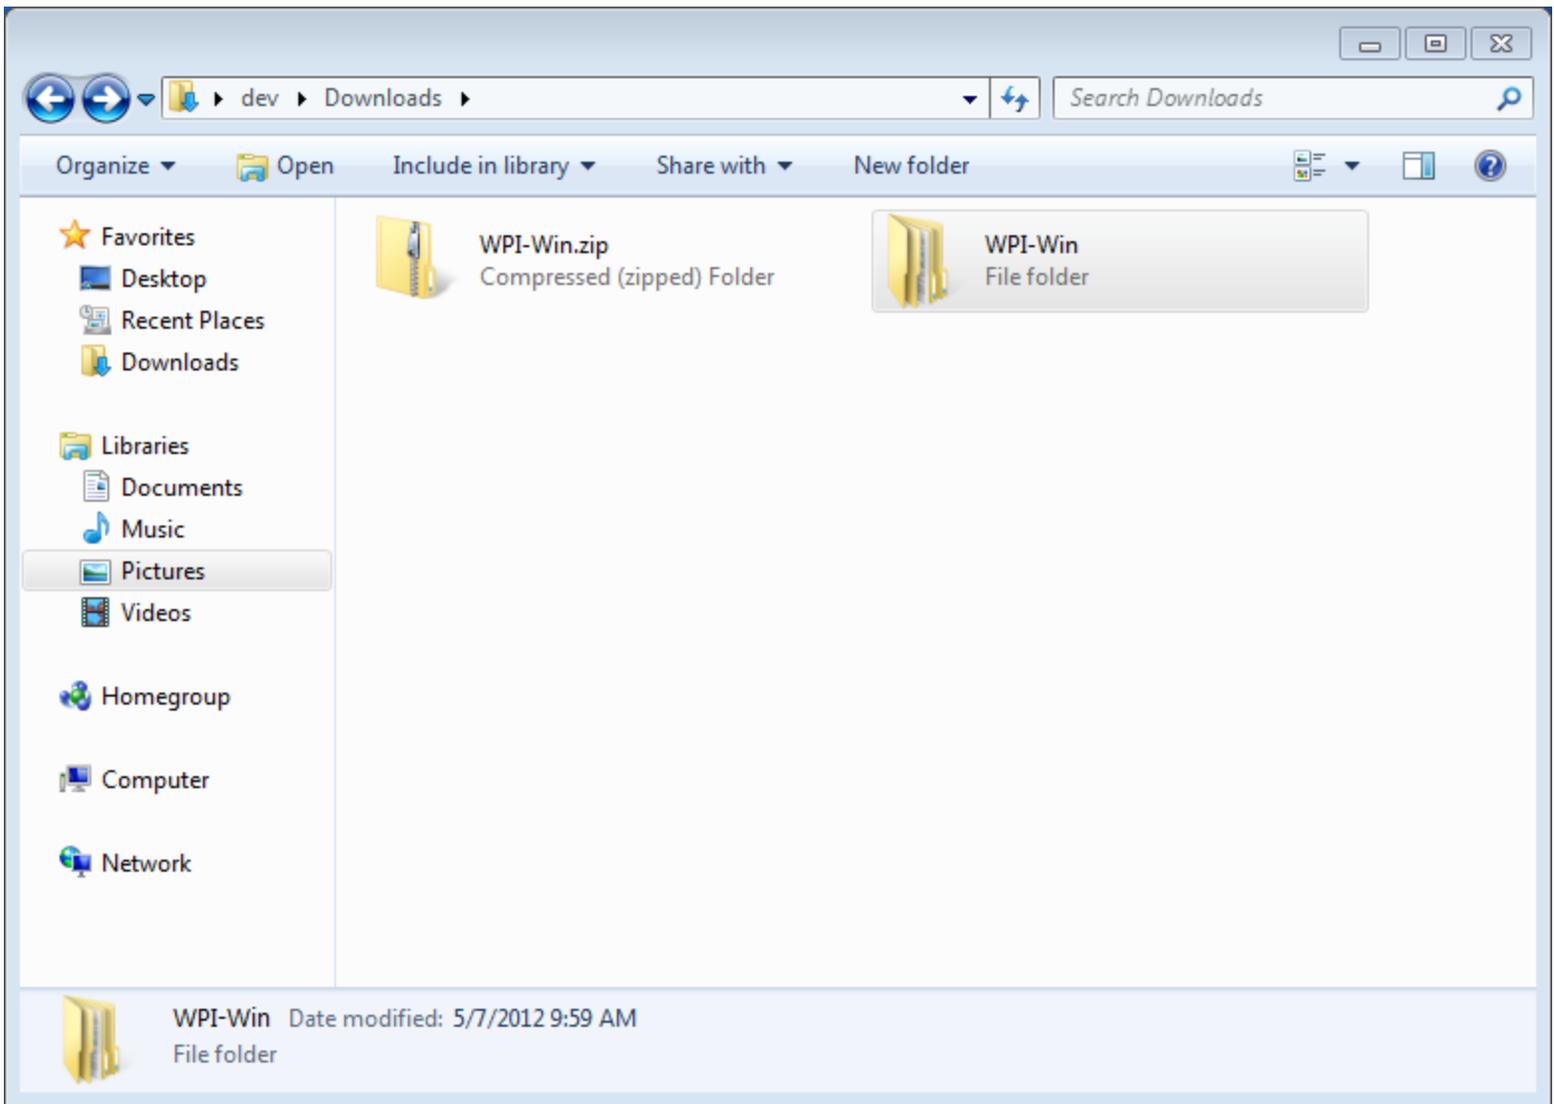

Download 2012 Release 6 (May 11, 2012)	System Requirements
 Download for Windows - (file size approx. 7MB) Download from the mirror site	No installation required. Just download, unzip/extract files to a folder of your choice and run the application. Simple, easy and clean. Fully compatible with 32-bit x86 and 64-bit x64 operating systems. Windows Windows XP or later (Vista, Windows 7 and 8) 32MB Free RAM 25MB Free Space
 Download for Macintosh (Intel) Download for (PowerPC)	Macintosh Intel or PowerPC Macintosh Mac OS X 10.4 or later 32MB Free RAM 25MB Free Space
 Download for Linux	Linux x86 Linux distributions with GTK+ 2.8 (or higher) glibc-2.4 CUPS (Common UNIX Printing System) libstdc++.so.6 * Please make the file as executable before running: <pre>sudo chmod +x wpdesktop</pre> If you are running a 64-bit Linux distribution on your machine, you need to install the ia32-libs package using apt-get: <pre>sudo apt-get install ia32-libs</pre> 32MB Free RAM

When the download is complete unzip/extract the software into a folder:

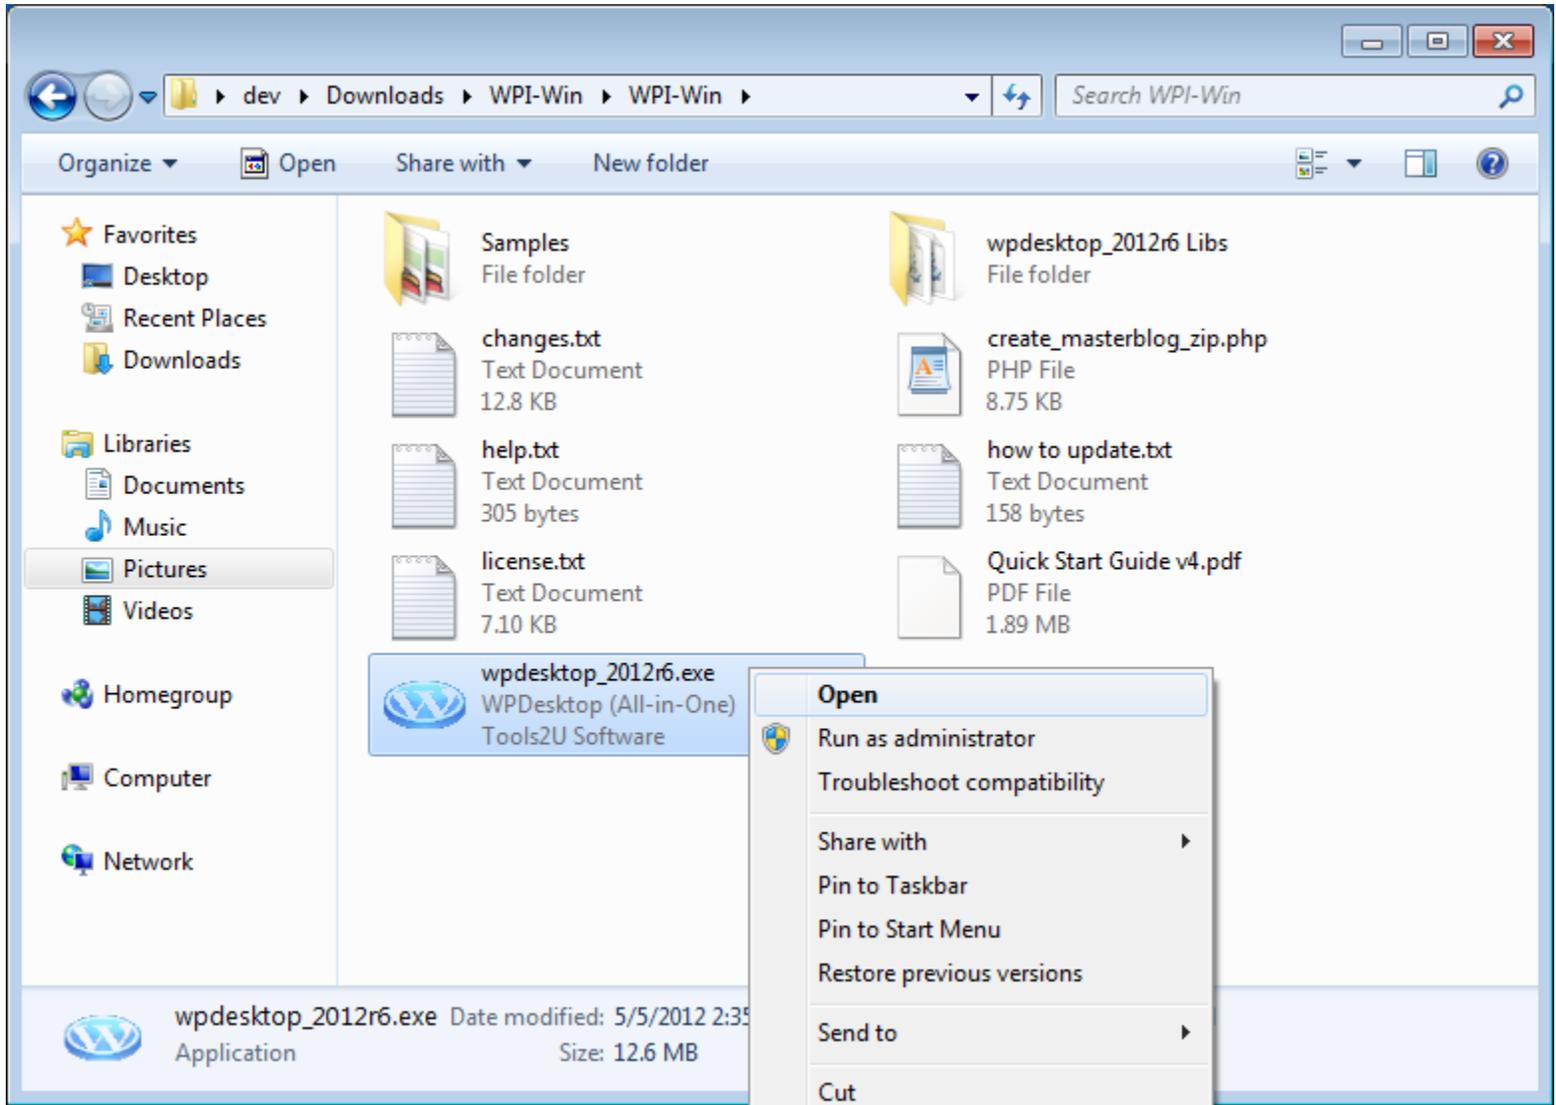

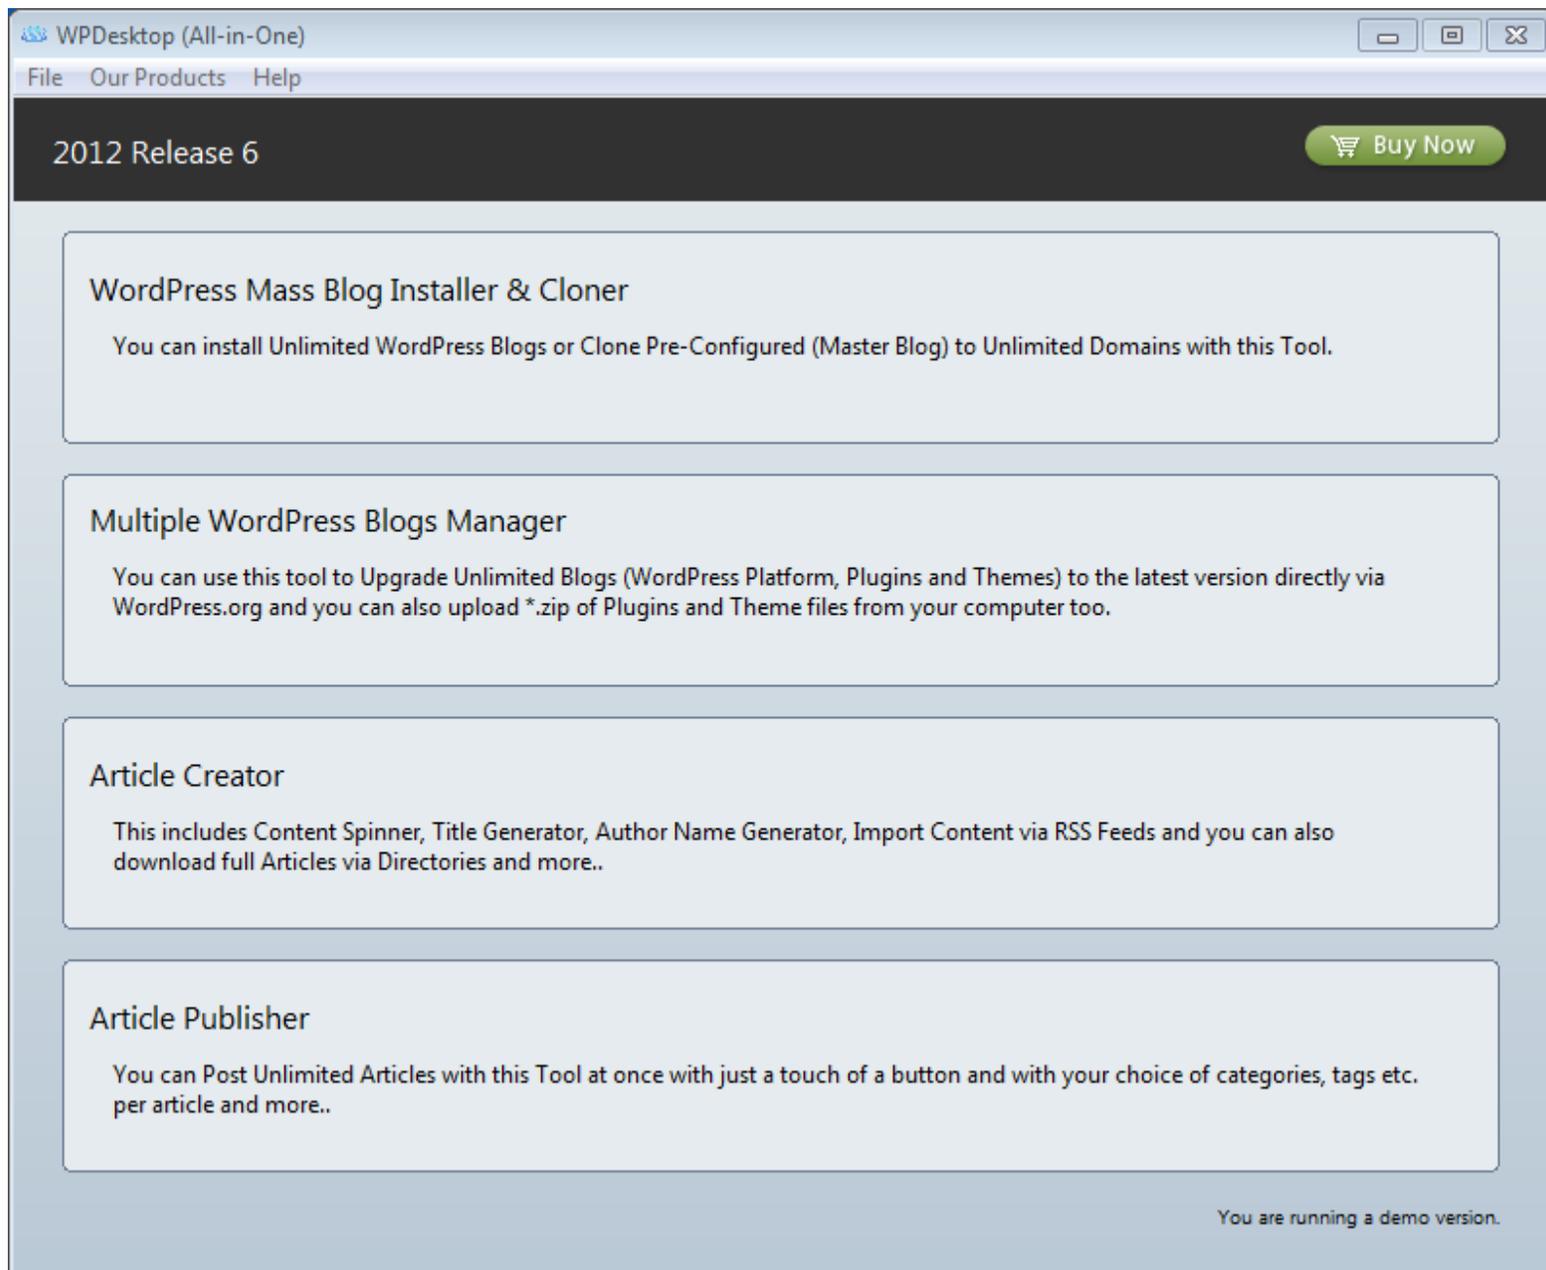

Run the software by double clicking on "wpdesktop_xxx.exe" etc.

2. Quick Start Menu

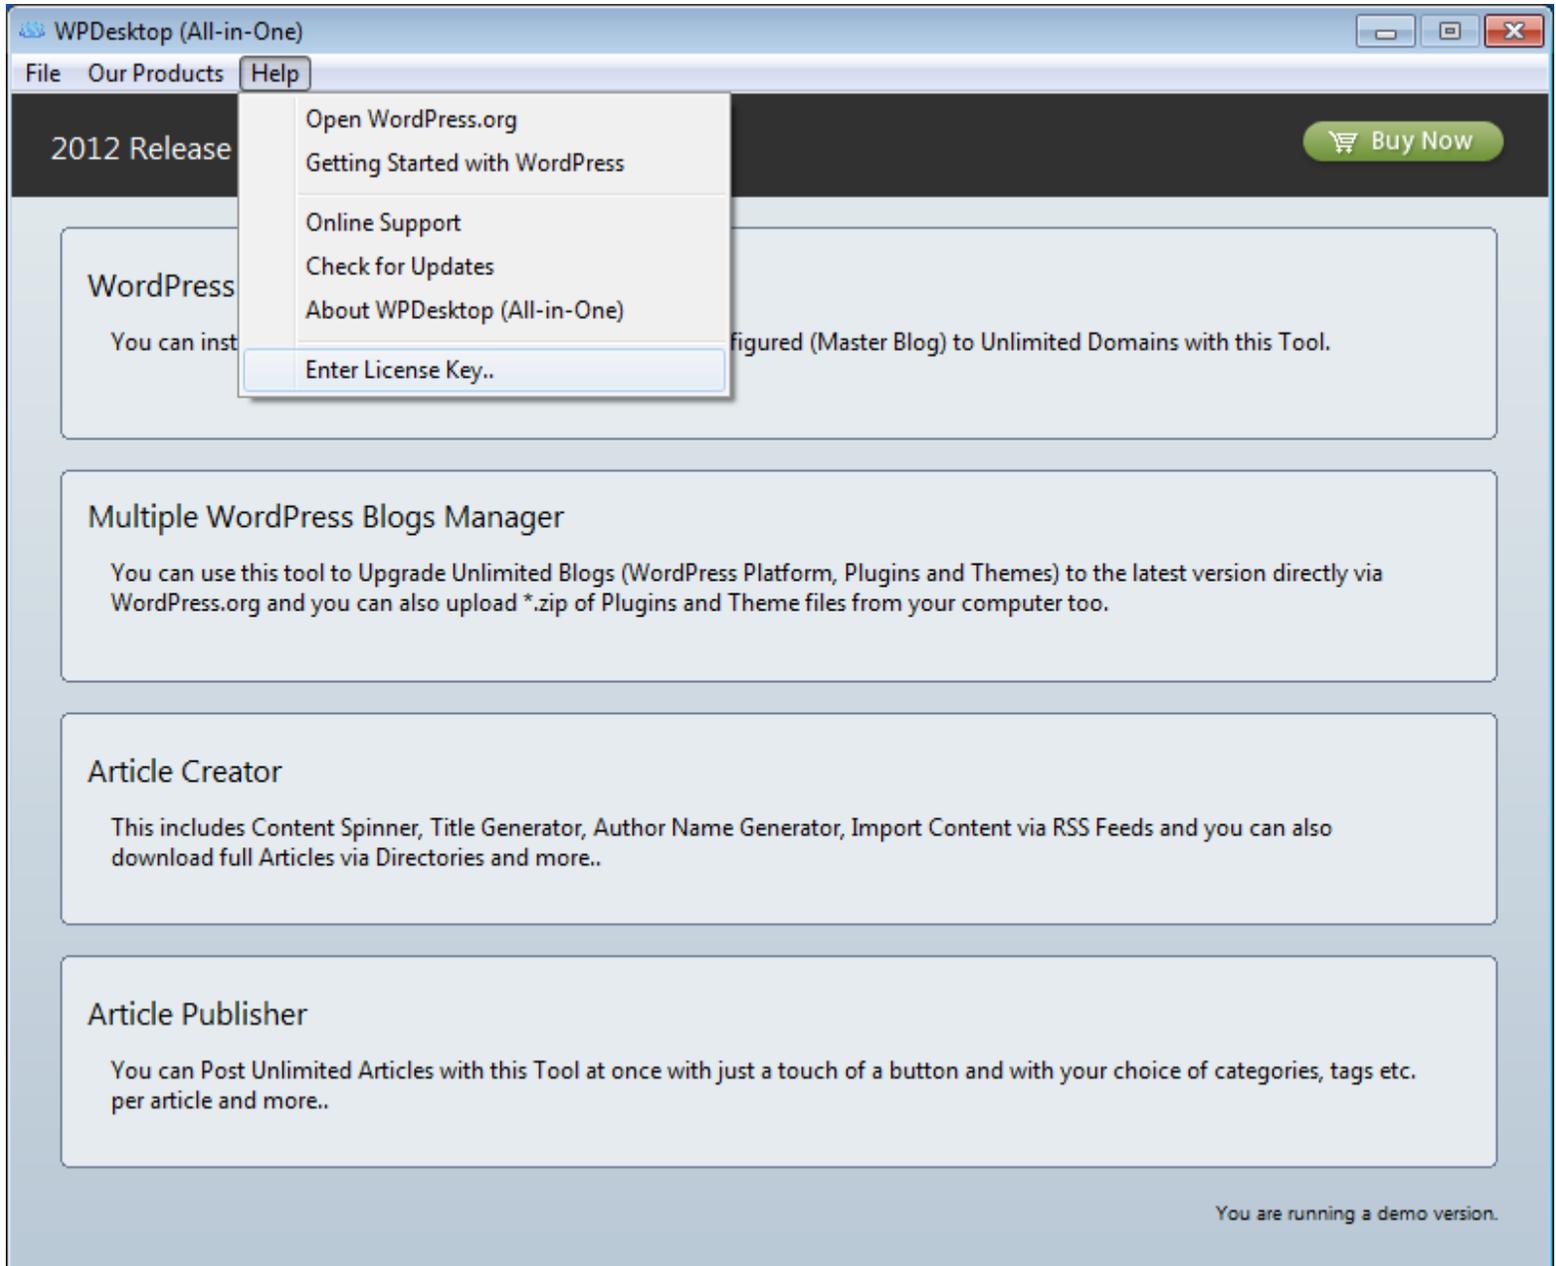

When you first open WPDesktop (All-in-One) Software, the Quick Start Menu will appear. From this screen you can jump right into any feature of the program.

3. How to Register the Software

Make sure you are connected to the internet.

Run the software and go to 'Enter License Key...' from 'Help' Menu.

Now enter the same email address used at the time of purchasing into E-mail Address field and click "Register" Button.

The screenshot shows the WPDesktop (All-in-One) software interface. At the top, there is a menu bar with "File", "Our Products", and "Help". Below the menu bar, the text "2012 Release 6" is displayed on the left, and a green "Buy Now" button is on the right. A central dialog box titled "Register Your WPDesktop (All-in-One)" is open. The dialog box contains the following fields and text:

- E-mail Address:** (enter the same email address used at the time of purchase)
Input field: xyz@domain.com
- Computer-ID:** WIN-29D0B242F9FBC9D05E626B4DFAED6A0F-SMQTZV
- License Key:**
- Expiration Date:**

Buttons: "Register" (blue), "Close" (grey).

Below the dialog box, there are two sections:

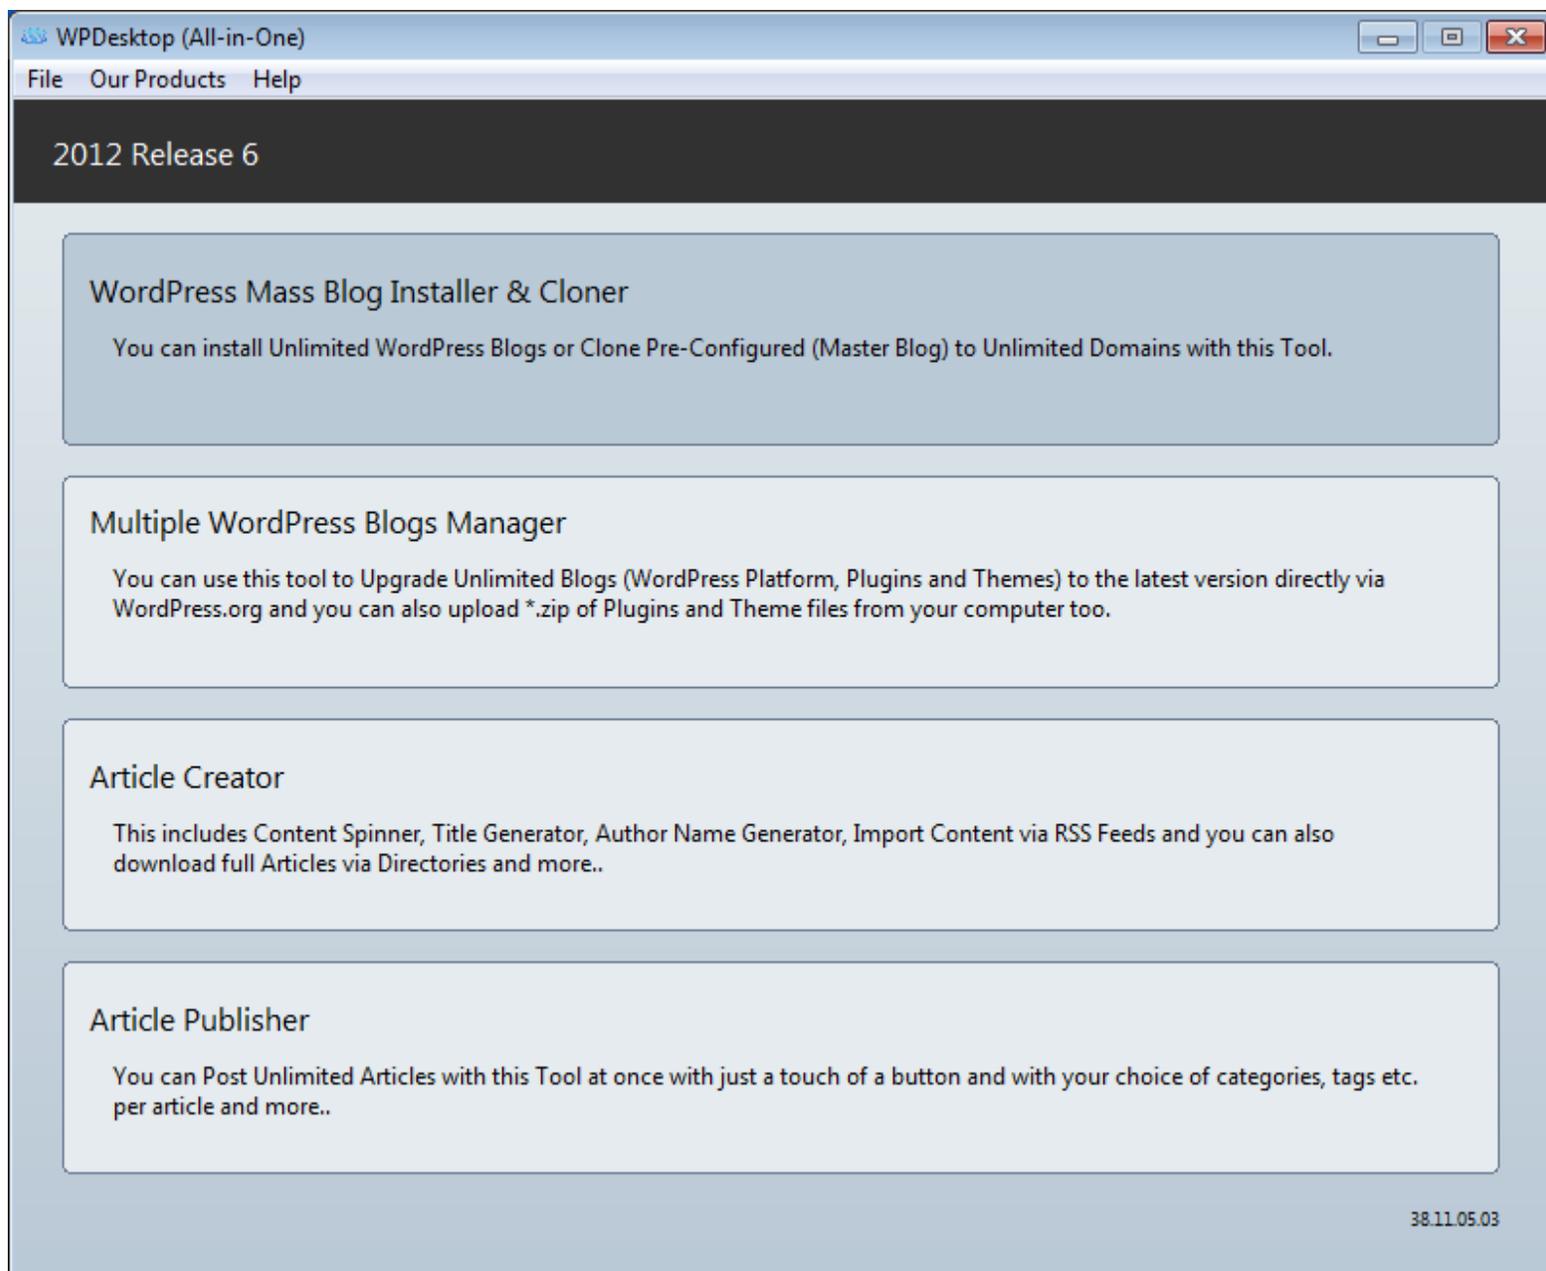

- Article Creator**
This includes Content Spinner, Title Generator, Author Name Generator, Import Content via RSS Feeds and you can also download full Articles via Directories and more..
- Article Publisher**
You can Post Unlimited Articles with this Tool at once with just a touch of a button and with your choice of categories, tags etc. per article and more..

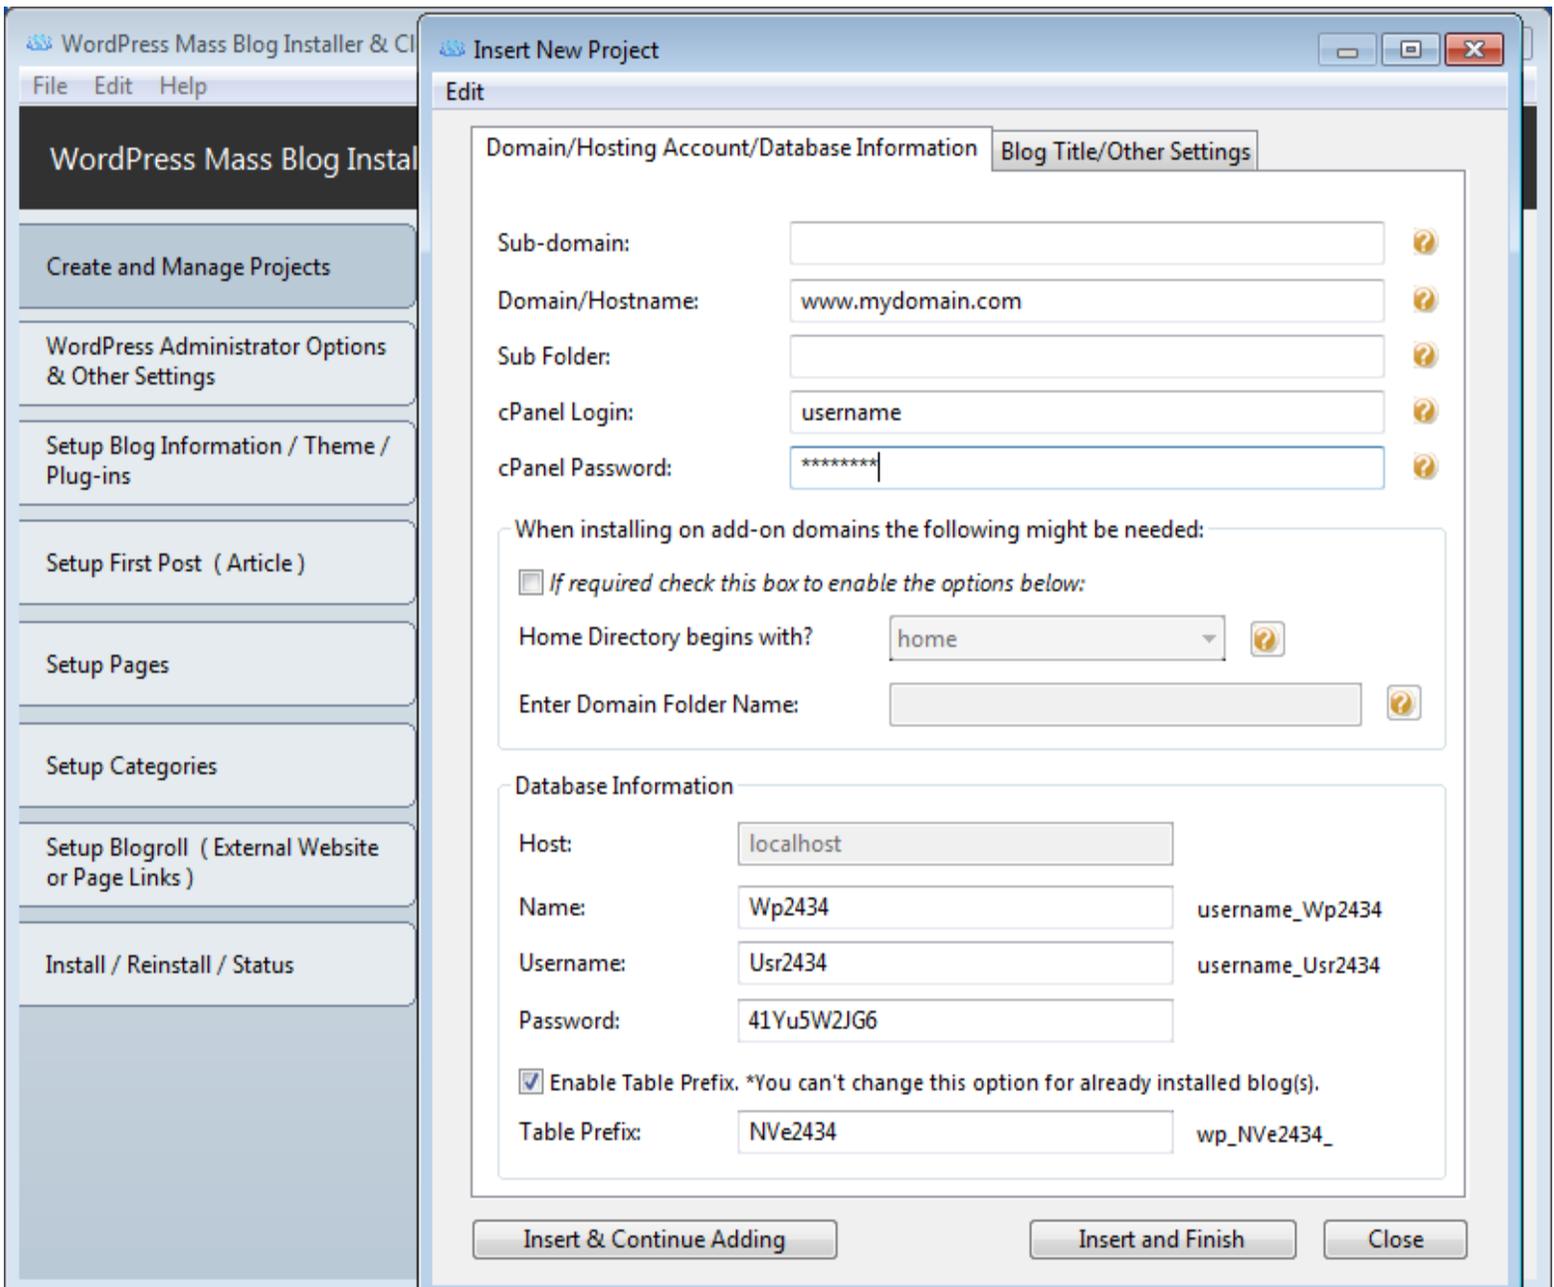

At the bottom right of the interface, it says "You are running a demo version."

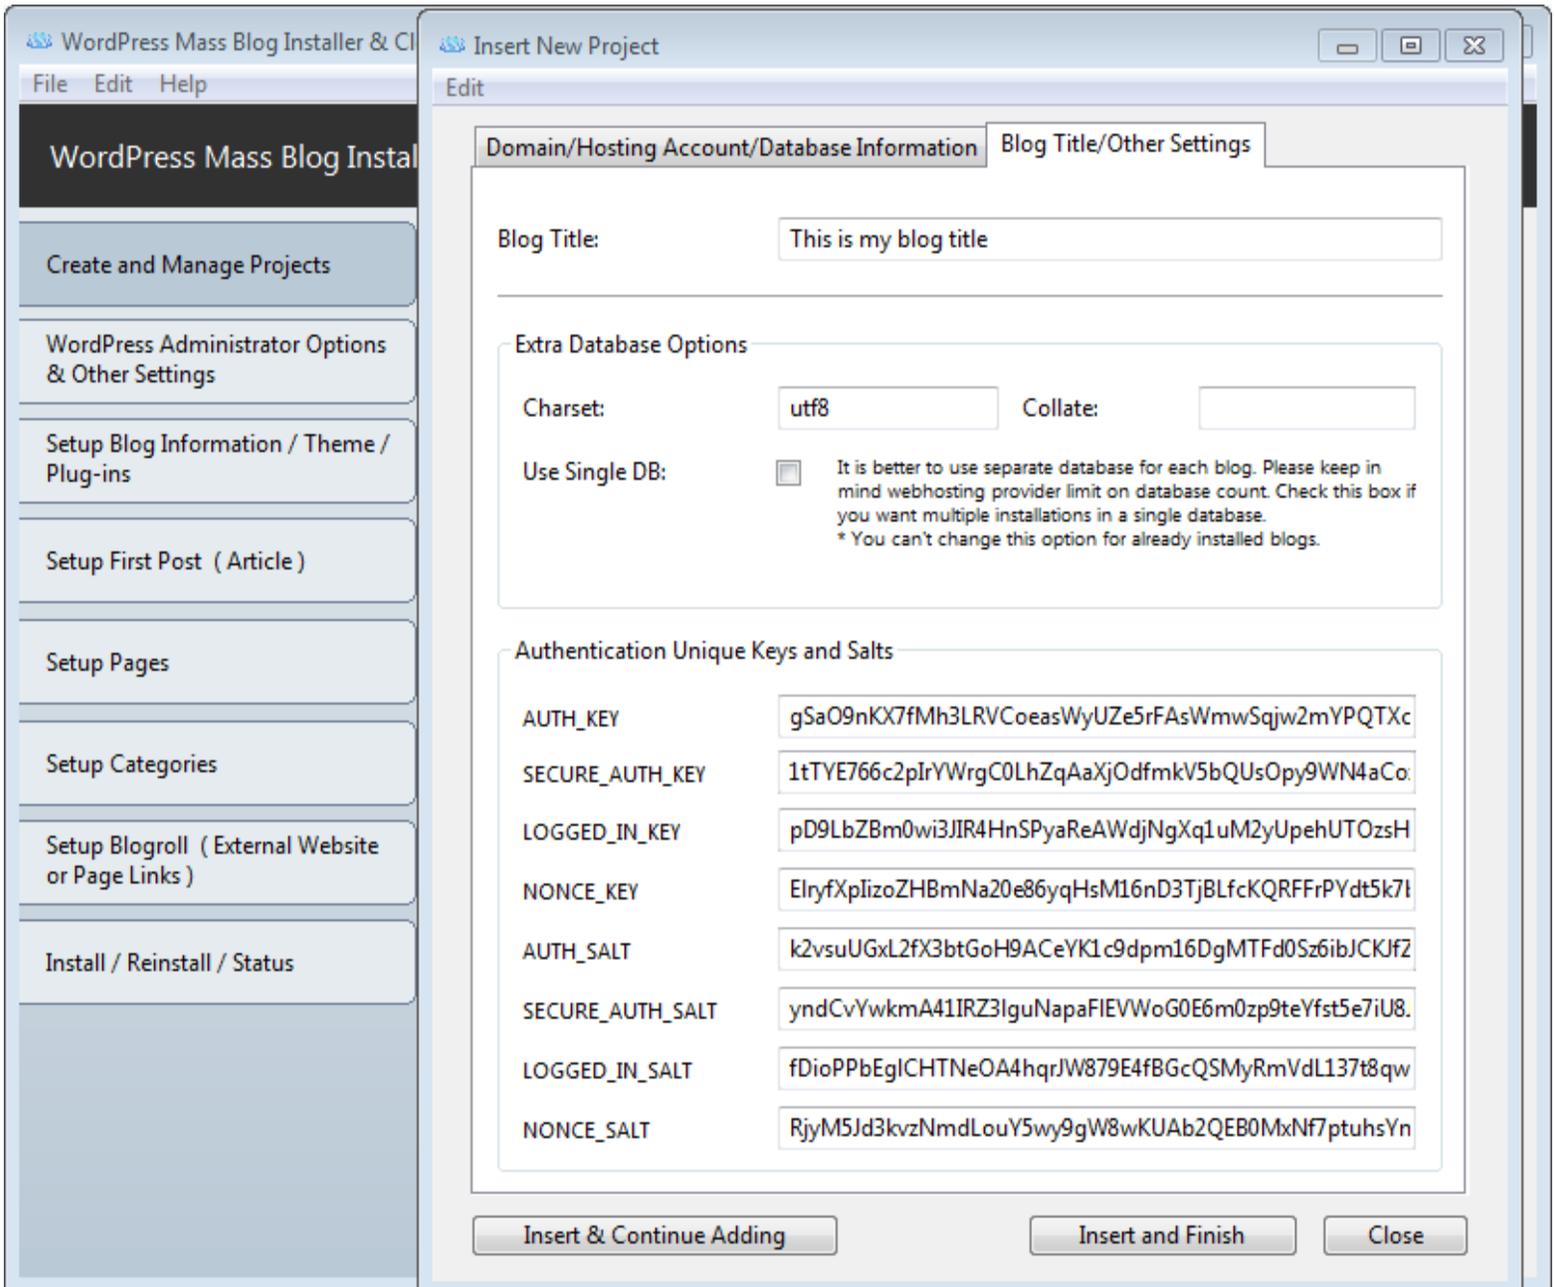

Now you are done registering your software, Congratulations.

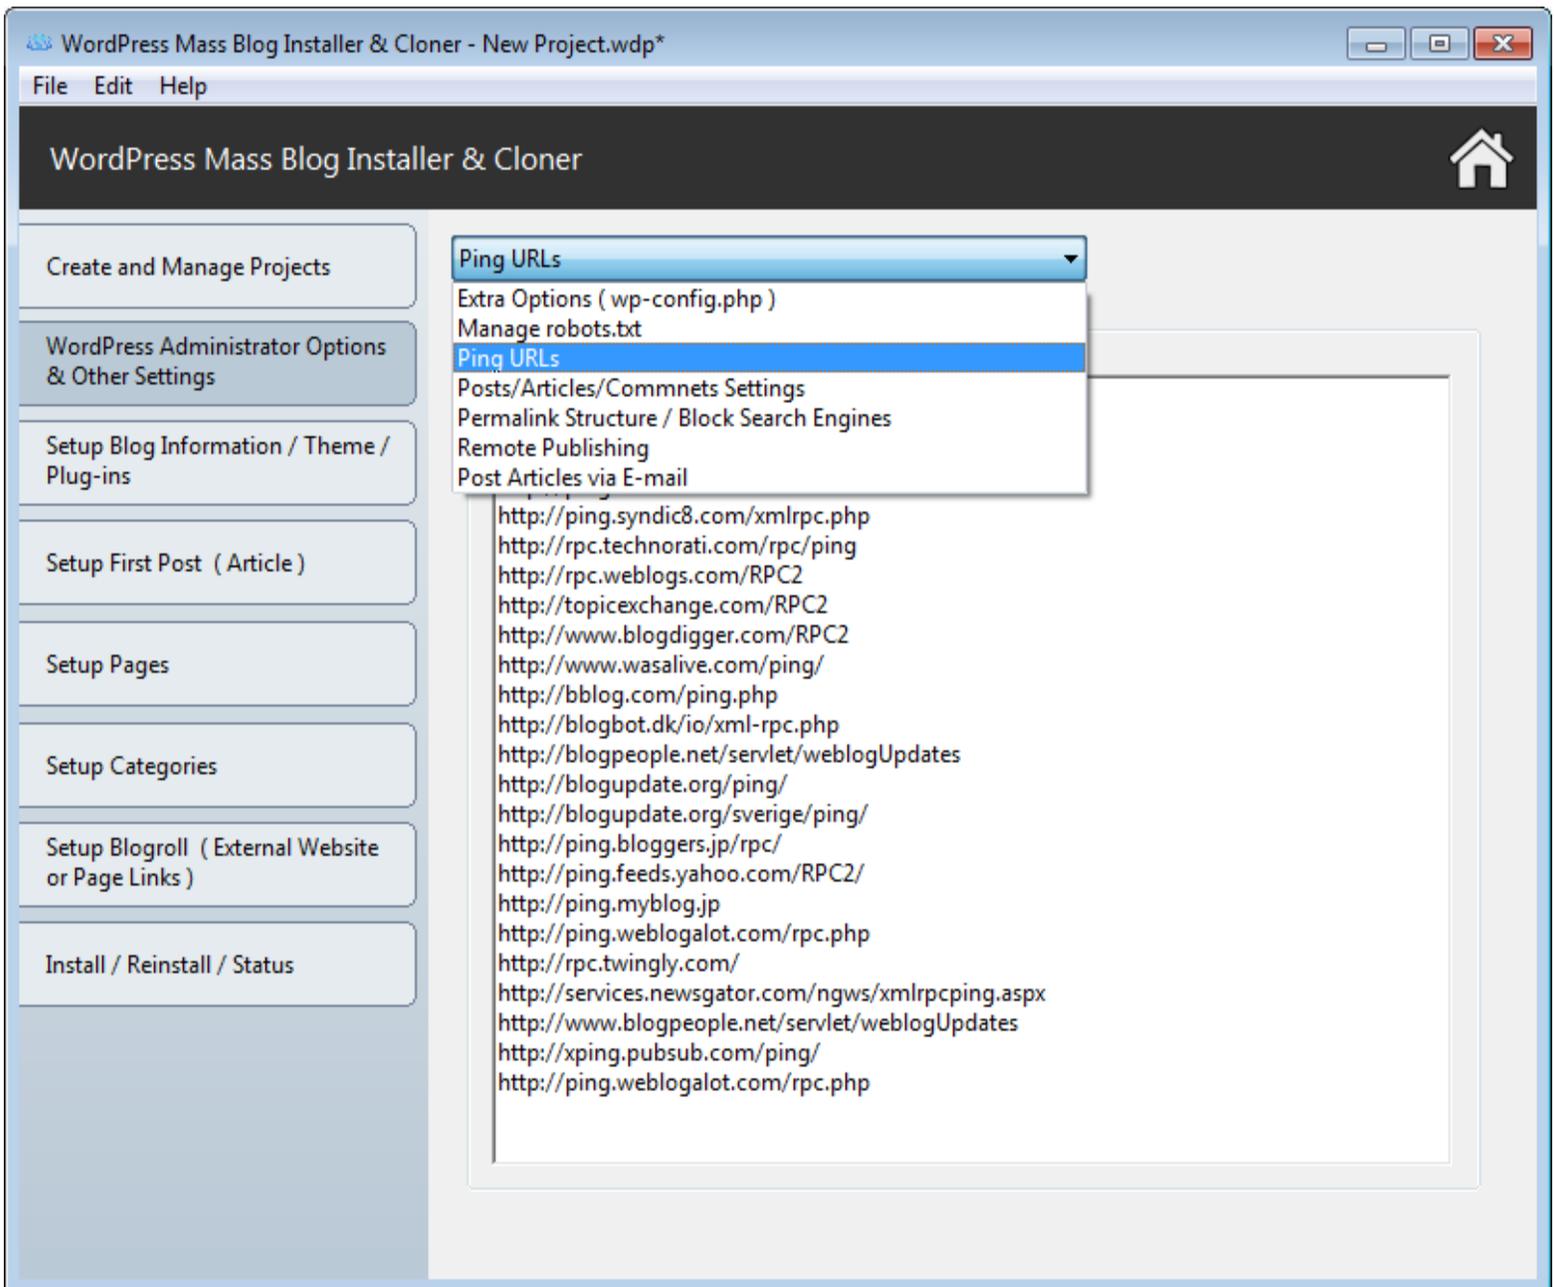

The screenshot shows the WPDesktop (All-in-One) software interface. At the top, there is a menu bar with 'File', 'Our Products', and 'Help'. Below the menu bar, the text '2012 Release 6' is displayed on the left, and a green 'Buy Now' button is on the right. The main content area is divided into several sections. A large dialog box titled 'Register Your WPDesktop (All-in-One)' is open, containing an input field for 'E-mail Address: (enter the same email address used at the time of purchase)' and a 'Register' button. Below this, a smaller dialog box with an information icon contains the text: 'Once again, Thank you for your purchase. We hope our Software will help you to save time and work more efficiently.' with an 'OK' button. The background content includes sections for 'Article Creator' and 'Article Publisher'. The 'Article Creator' section states: 'This includes Content Spinner, Title Generator, Author Name Generator, Import Content via RSS Feeds and you can also download full Articles via Directories and more..'. The 'Article Publisher' section states: 'You can Post Unlimited Articles with this Tool at once with just a touch of a button and with your choice of categories, tags etc. per article and more..'. At the bottom right, a small text reads 'You are running a demo version.'

» WordPress Mass Blog Installer & Cloner - (Quick Standard WordPress Blog Installation)

In this example we are going to show you how to, with less information, get the standard blog installation done within few minutes. So this is going to be without your WordPress Theme, Plug-ins and Settings instead this uses the Default WordPress Theme and Plugins etc.

Run the software and click on WordPress Mass Blog Installer & Cloner Tool:

» In this example we are going to install your blog in "mydomain.com" which is Primary Domain in cPanel, for add-on domain check the next section

1. Enter your Domain/Hostname of your blog, this can be found in your cPanel account.
2. Enter your cPanel login and cPanel Password.

Skip the next section, if Home Directory is /home/username.

Domain/Hosting Account/Database Information Blog Title/Other Settings

Sub-domain:

Domain/Hostname:

Sub Folder:

cPanel Login:

cPanel Password:

When installing on add-on domains the following might be needed:

If required check this box to enable the options below:

Home Directory begins with?

Enter Domain Folder Name:

Database Information

Host:

Name: username_Wp2434

Username: username_Usr2434

Password:

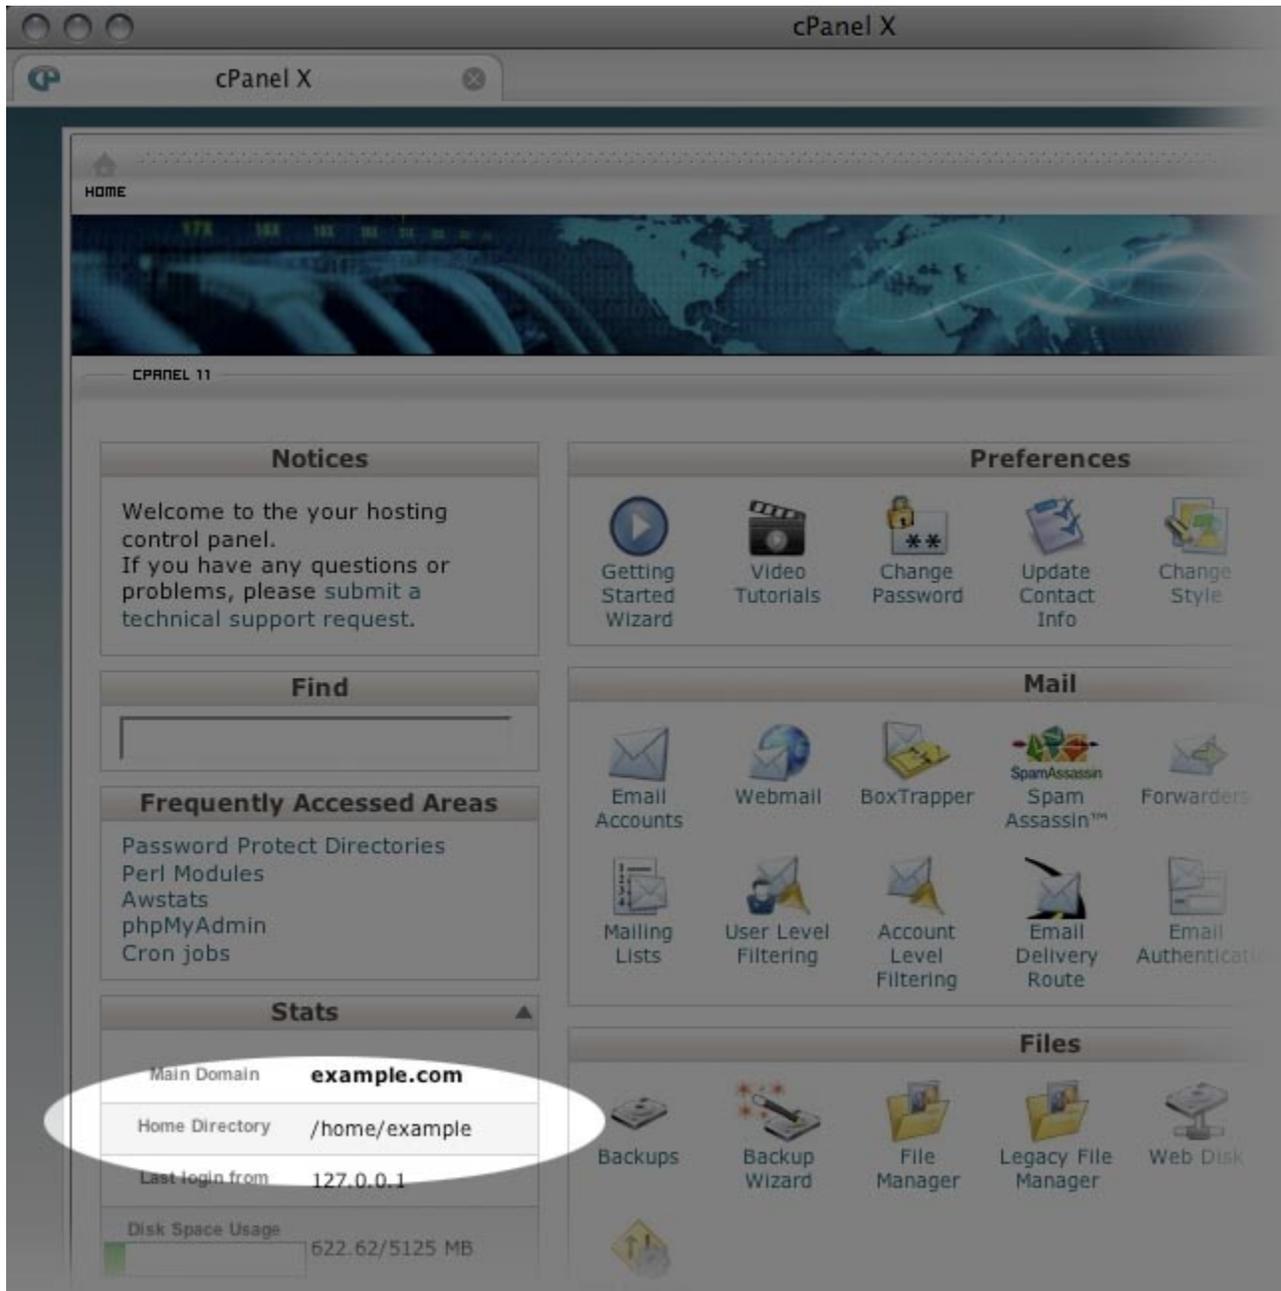

Enable Table Prefix. *You can't change this option for already installed blog(s).

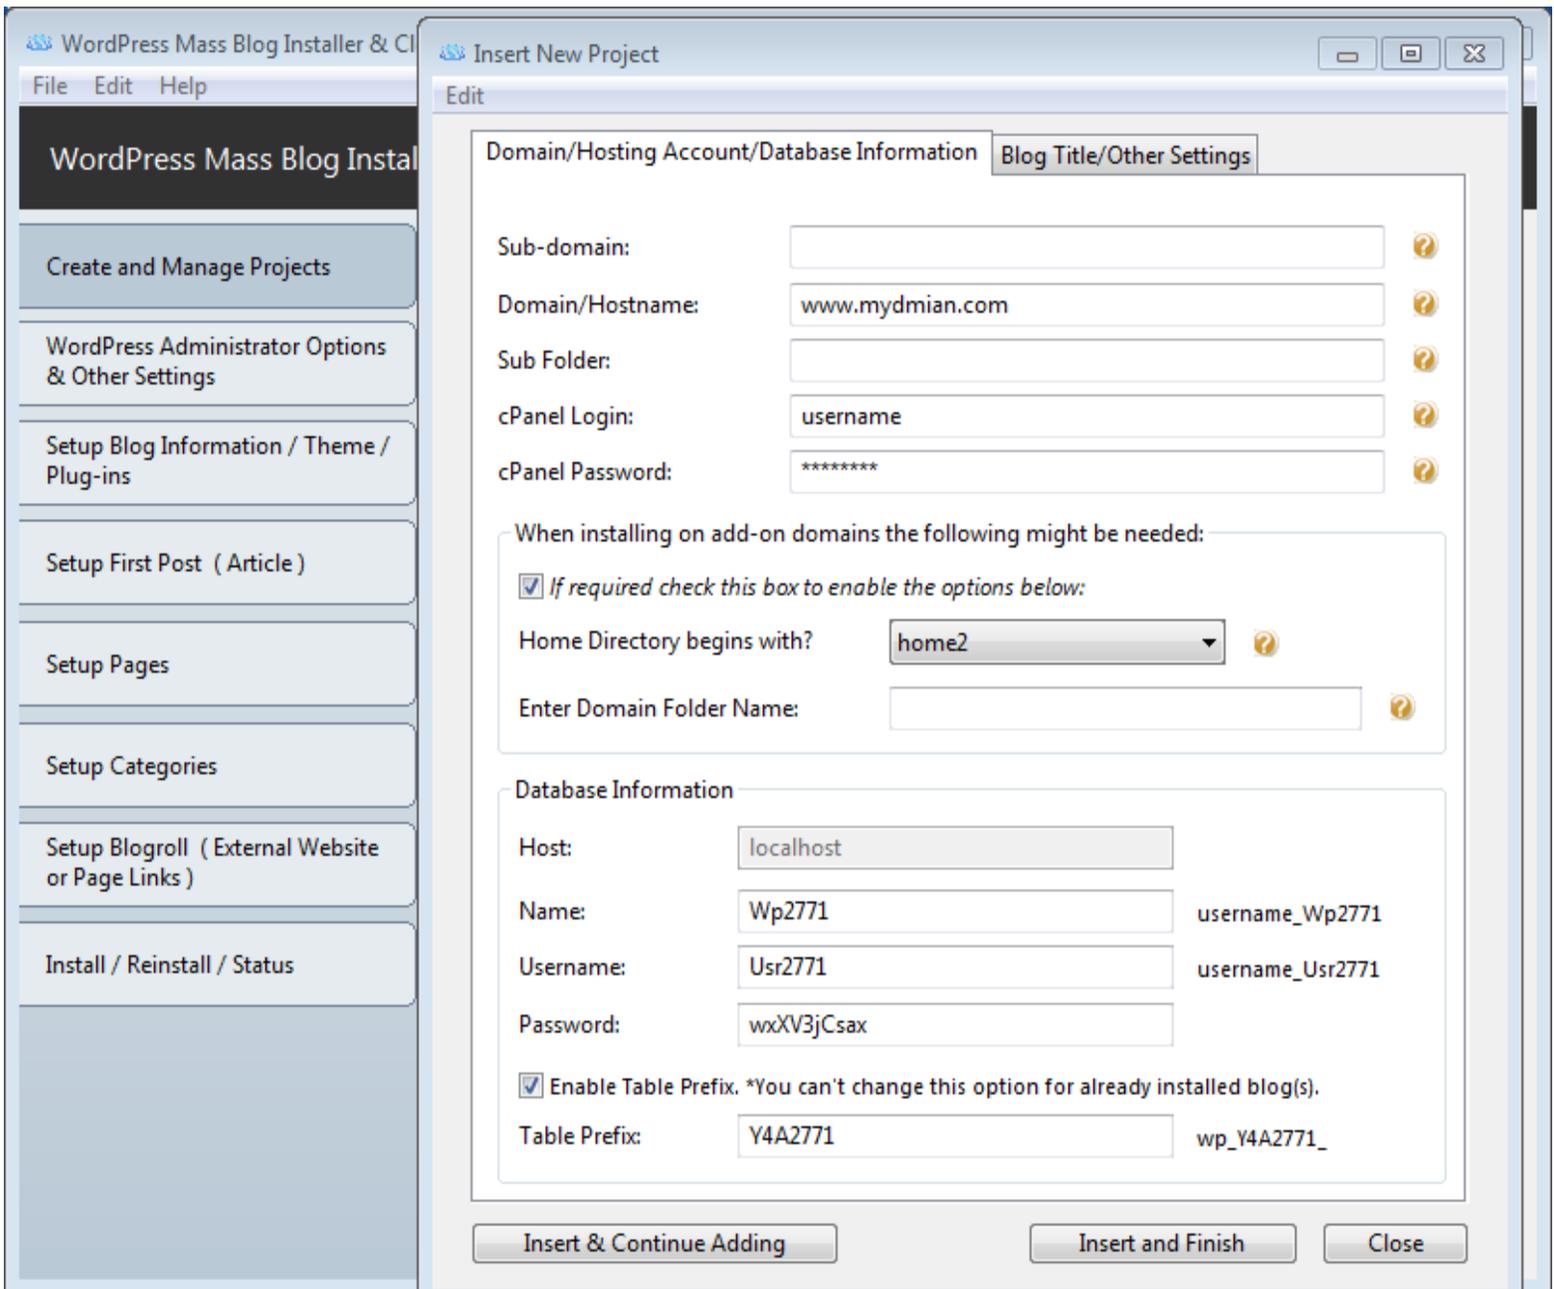

Table Prefix: wp_NVe2434_

Insert & Continue Adding Insert and Finish Close

If Home Directory e.g. /Home2/username under the stats tab (left side) in cPanel:

* After login into cPanel, this is how you can find your Home Directory

» In this example we are going to install on "www.examplesite2.com" which is Add-On Domain in cPanel

* After login into cPanel, this is how you can find your Domain Folder Name for add-on domains:

Addon Domains

 Video Tutorial

An addon domain allows you to reach a sub-domain when entering the name of the addon domain into a browser. This means that you can host additional domains from your account, if allowed by your hosting provider. Addon Domains are relative to your account's home directory. The  icon signifies your home directory which is /home/username.

Create an Add-on Domain

New Domain Name:

Subdomain/Ftp Username:

Document Root: 

Password: [Generate Password](#)

Password Strength:

Very Weak (0/100)

Password (Again):

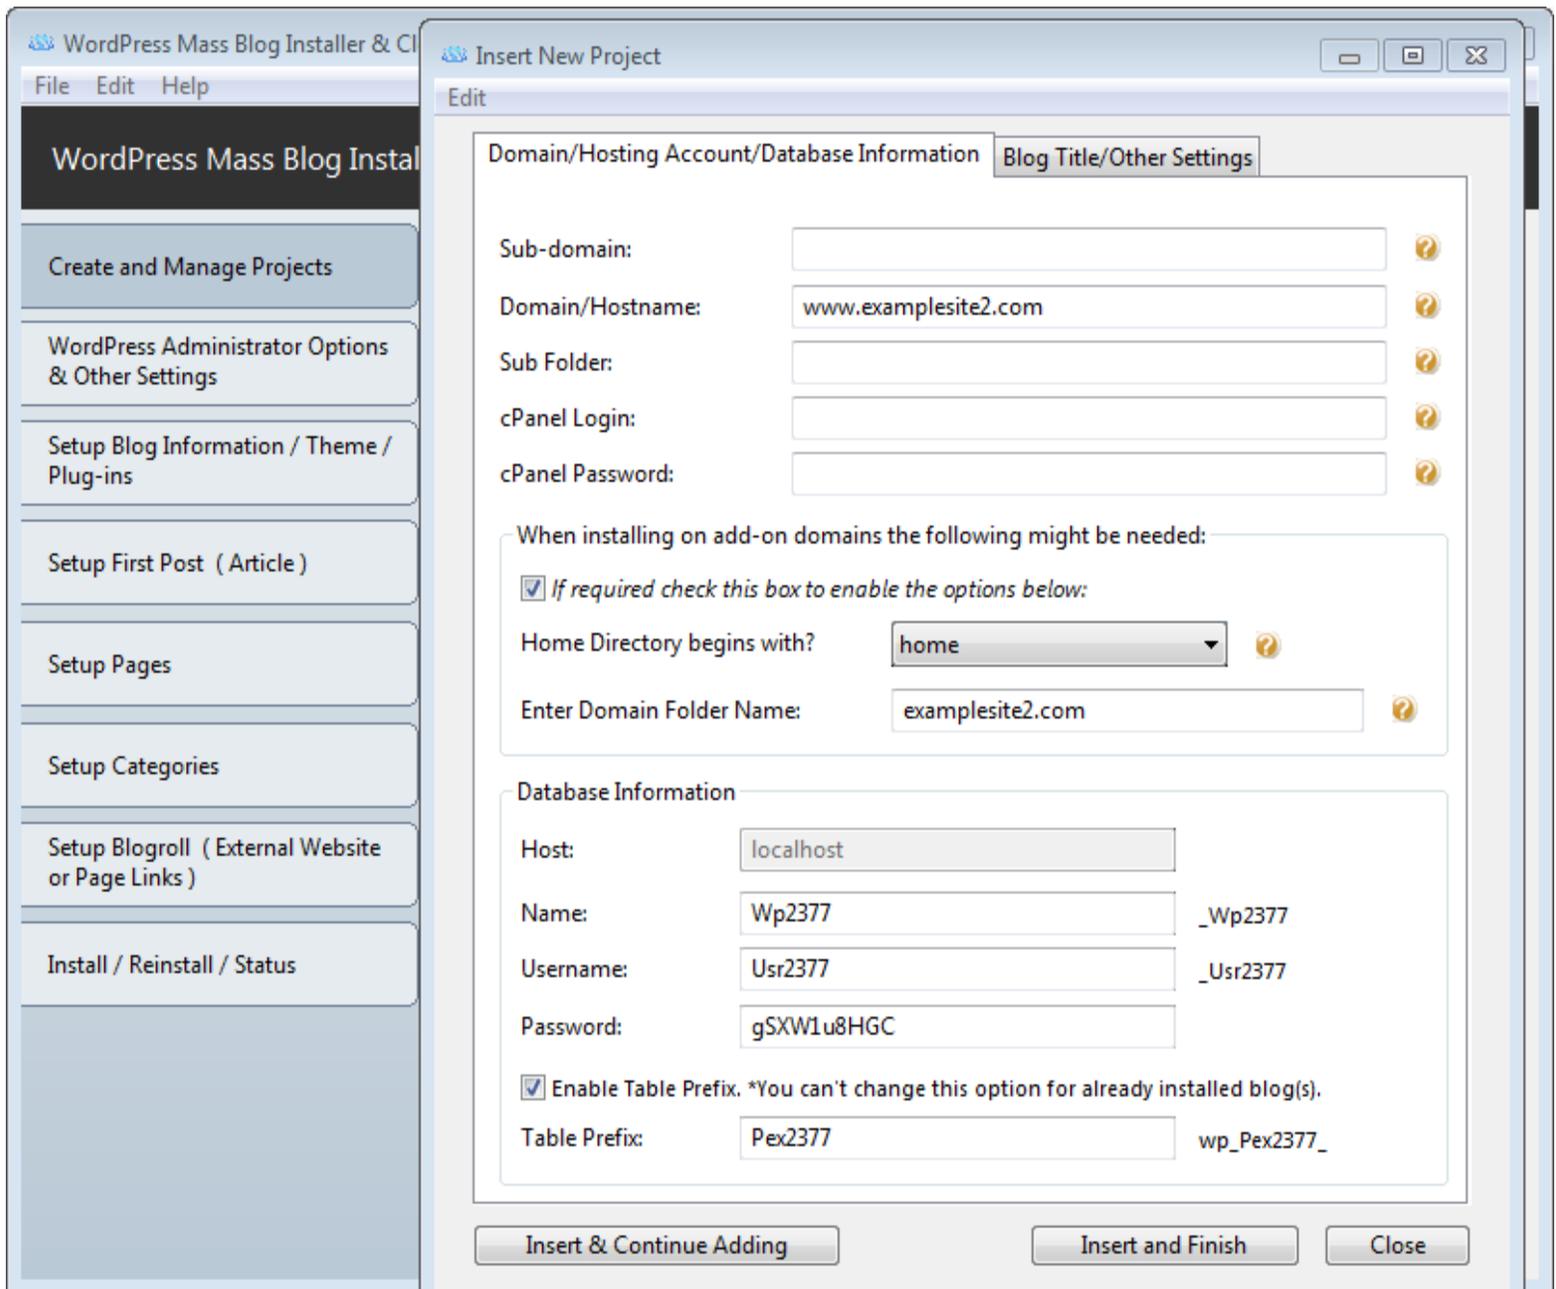

[Add Domain!](#)

Hint: This feature must be enabled for your account before you can use it. Addon Domains will not be functional unless the domain name is registered with a valid registrar and configured to point to our DNS servers.

Modify Add-on Domain

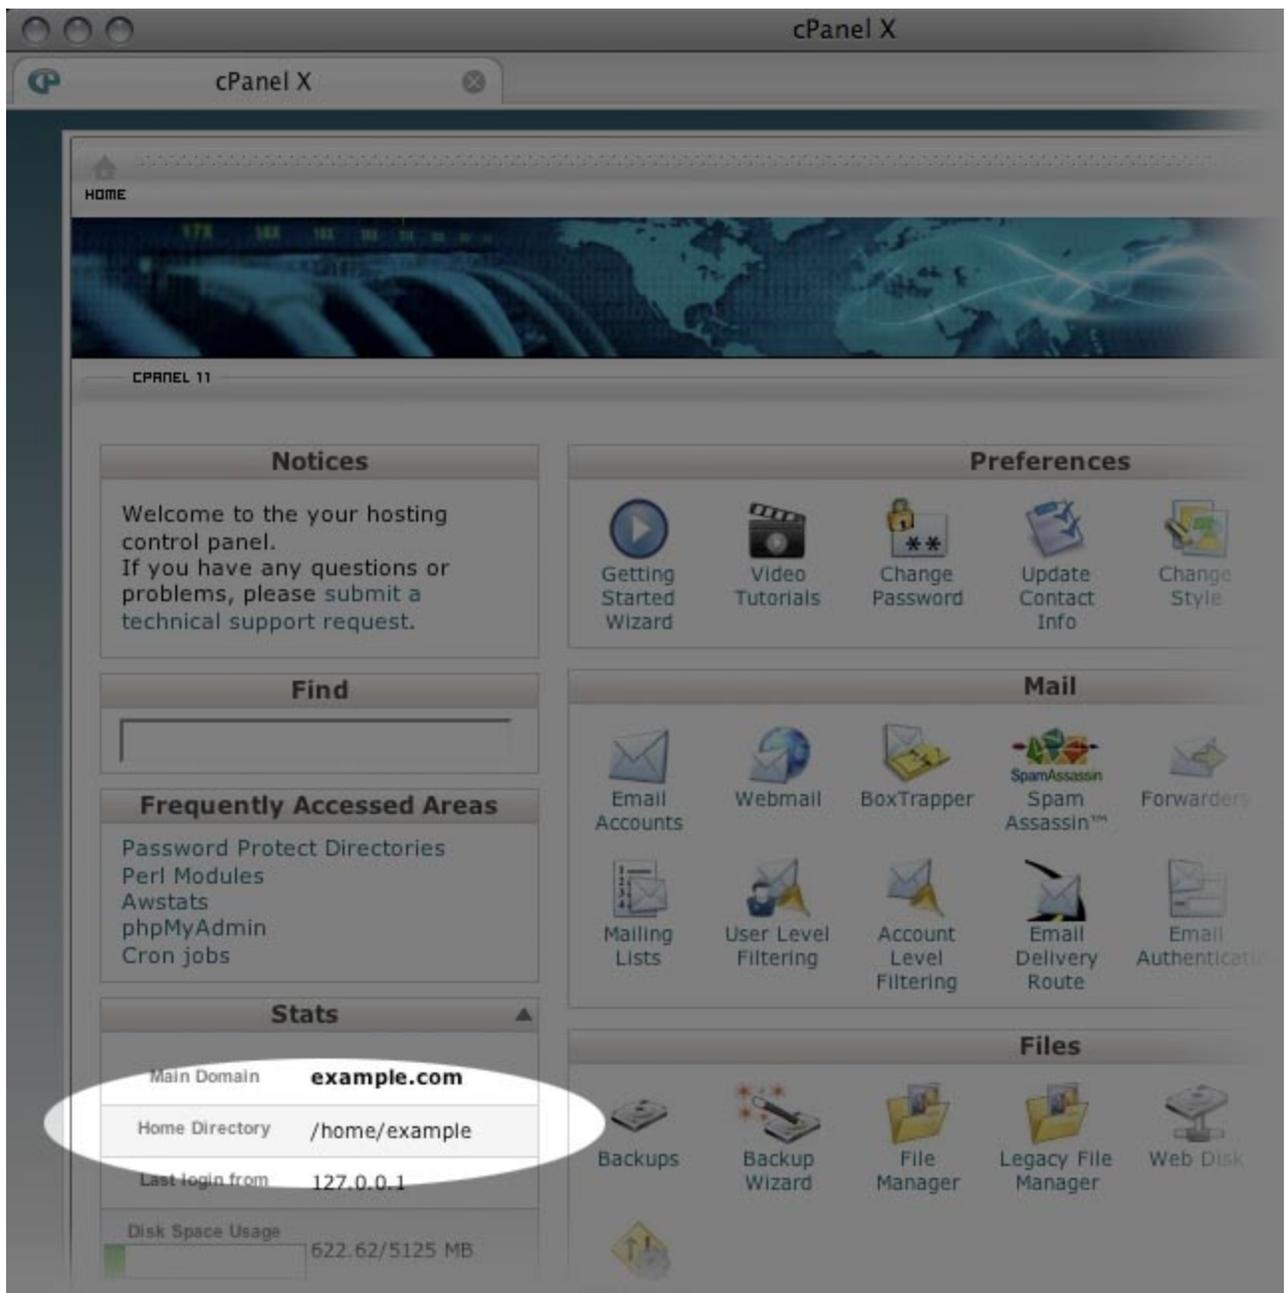

Search [Go](#)

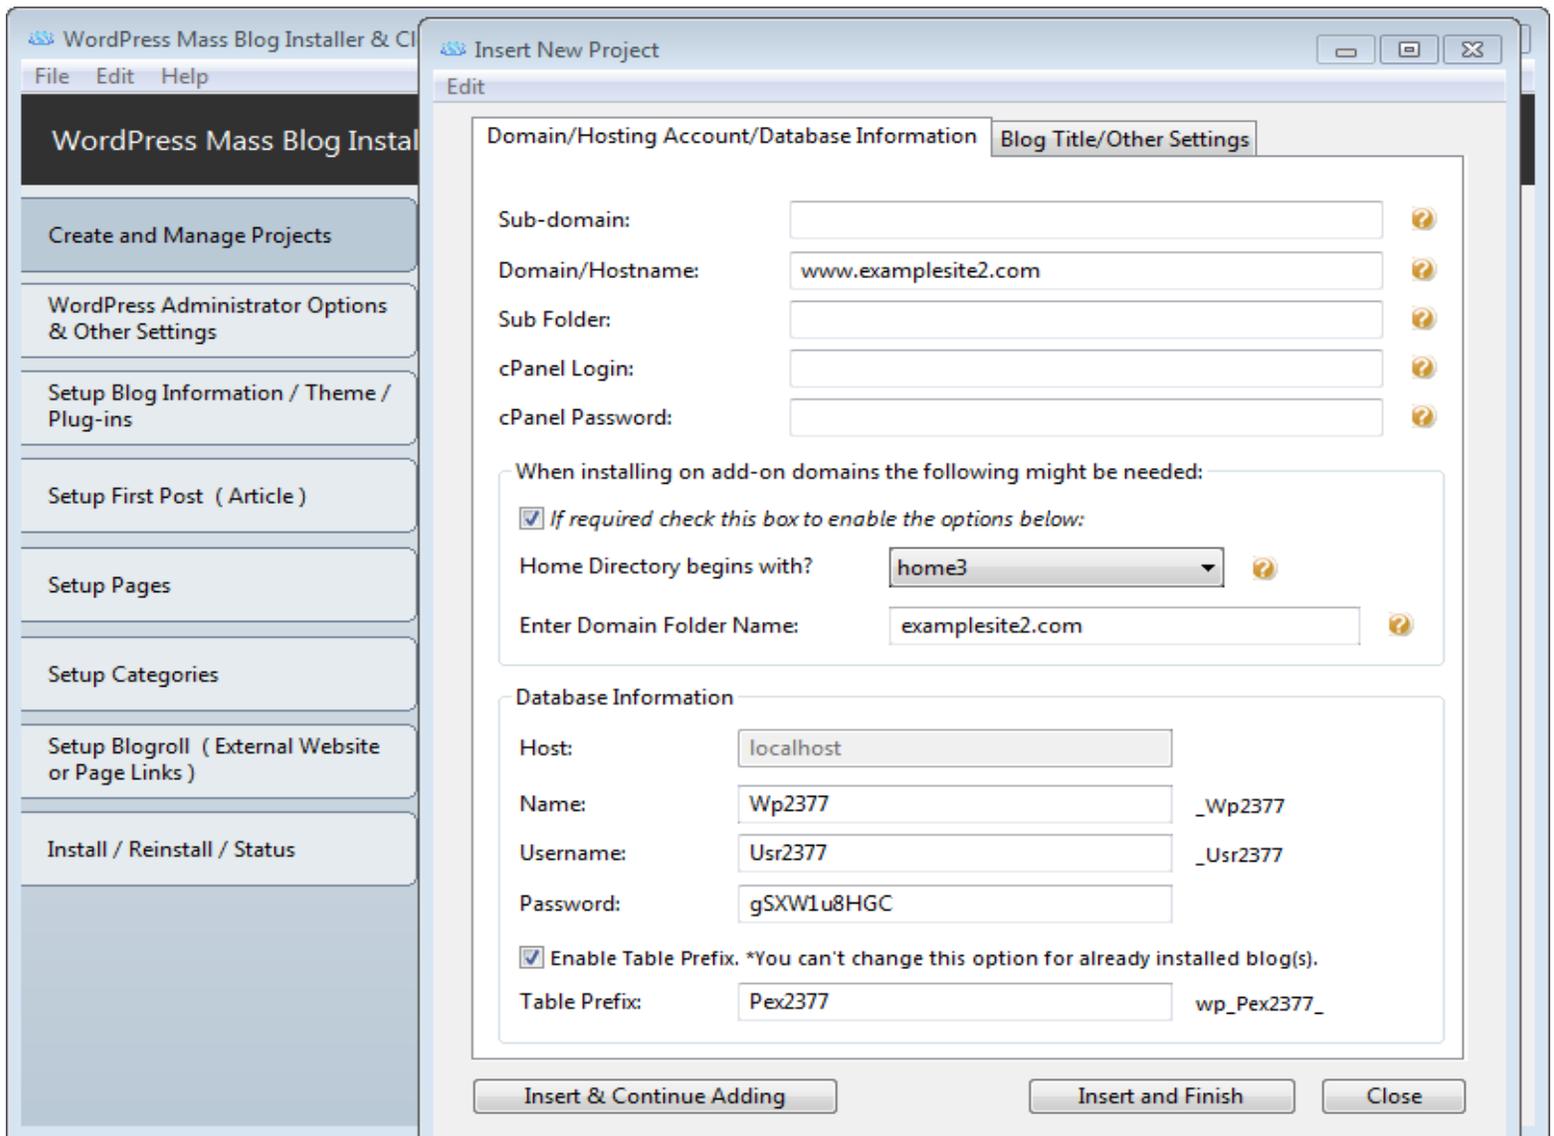

ADDON DOMAINS	DOCUMENT ROOT	USERNAME	REDIRECTS TO	ACTIONS	
examplesite1.com	 /public_html /examplesite1.com	examplesite1	not redirected	Remove	Manage Redirection
examplesite2.com	 /public_html /examplesite2.com	examplesite2	not redirected	Remove	Manage Redirection
examplesite3.com	 /public_html /examplesite3.com	examplesite3	not redirected	Remove	Manage Redirection

* If Home Directory e.g. /Home3/username under the stats tab (left side) in cPanel:

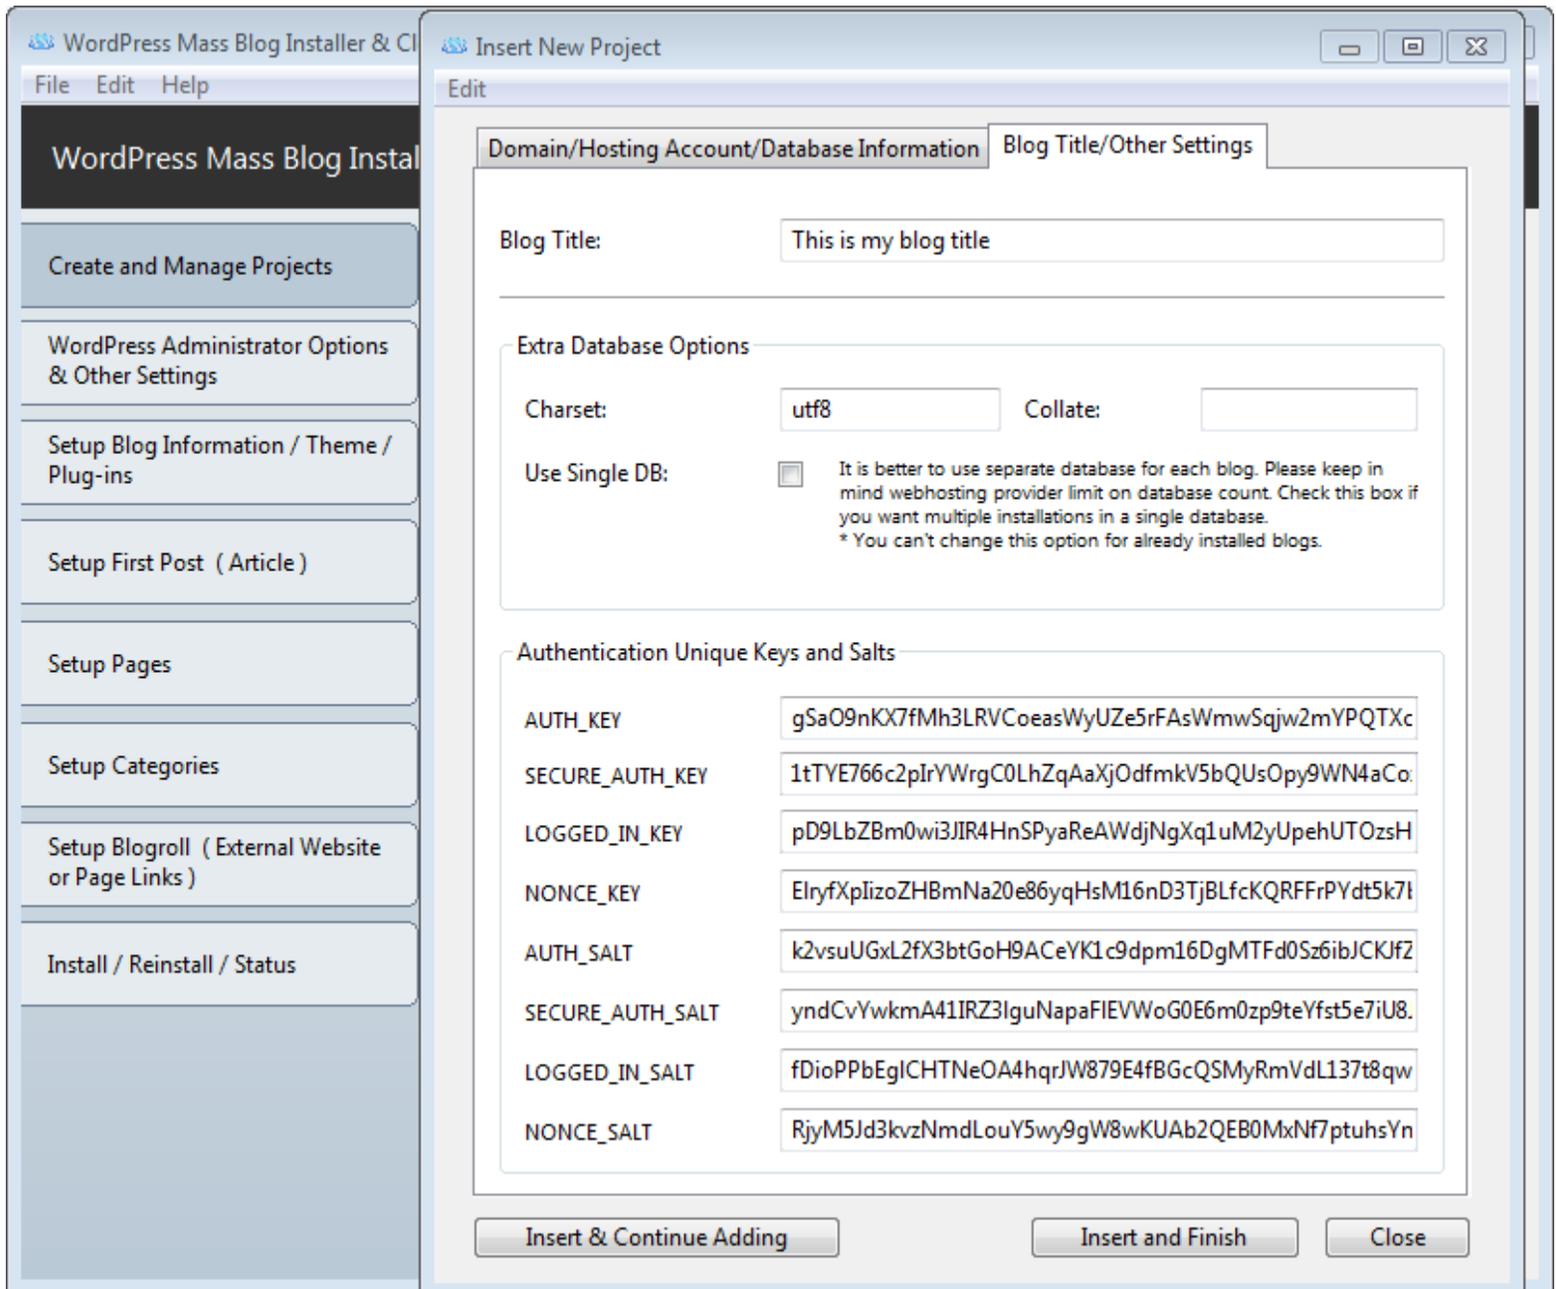

* **After login into cPanel**, this is how you can find your Home Directory

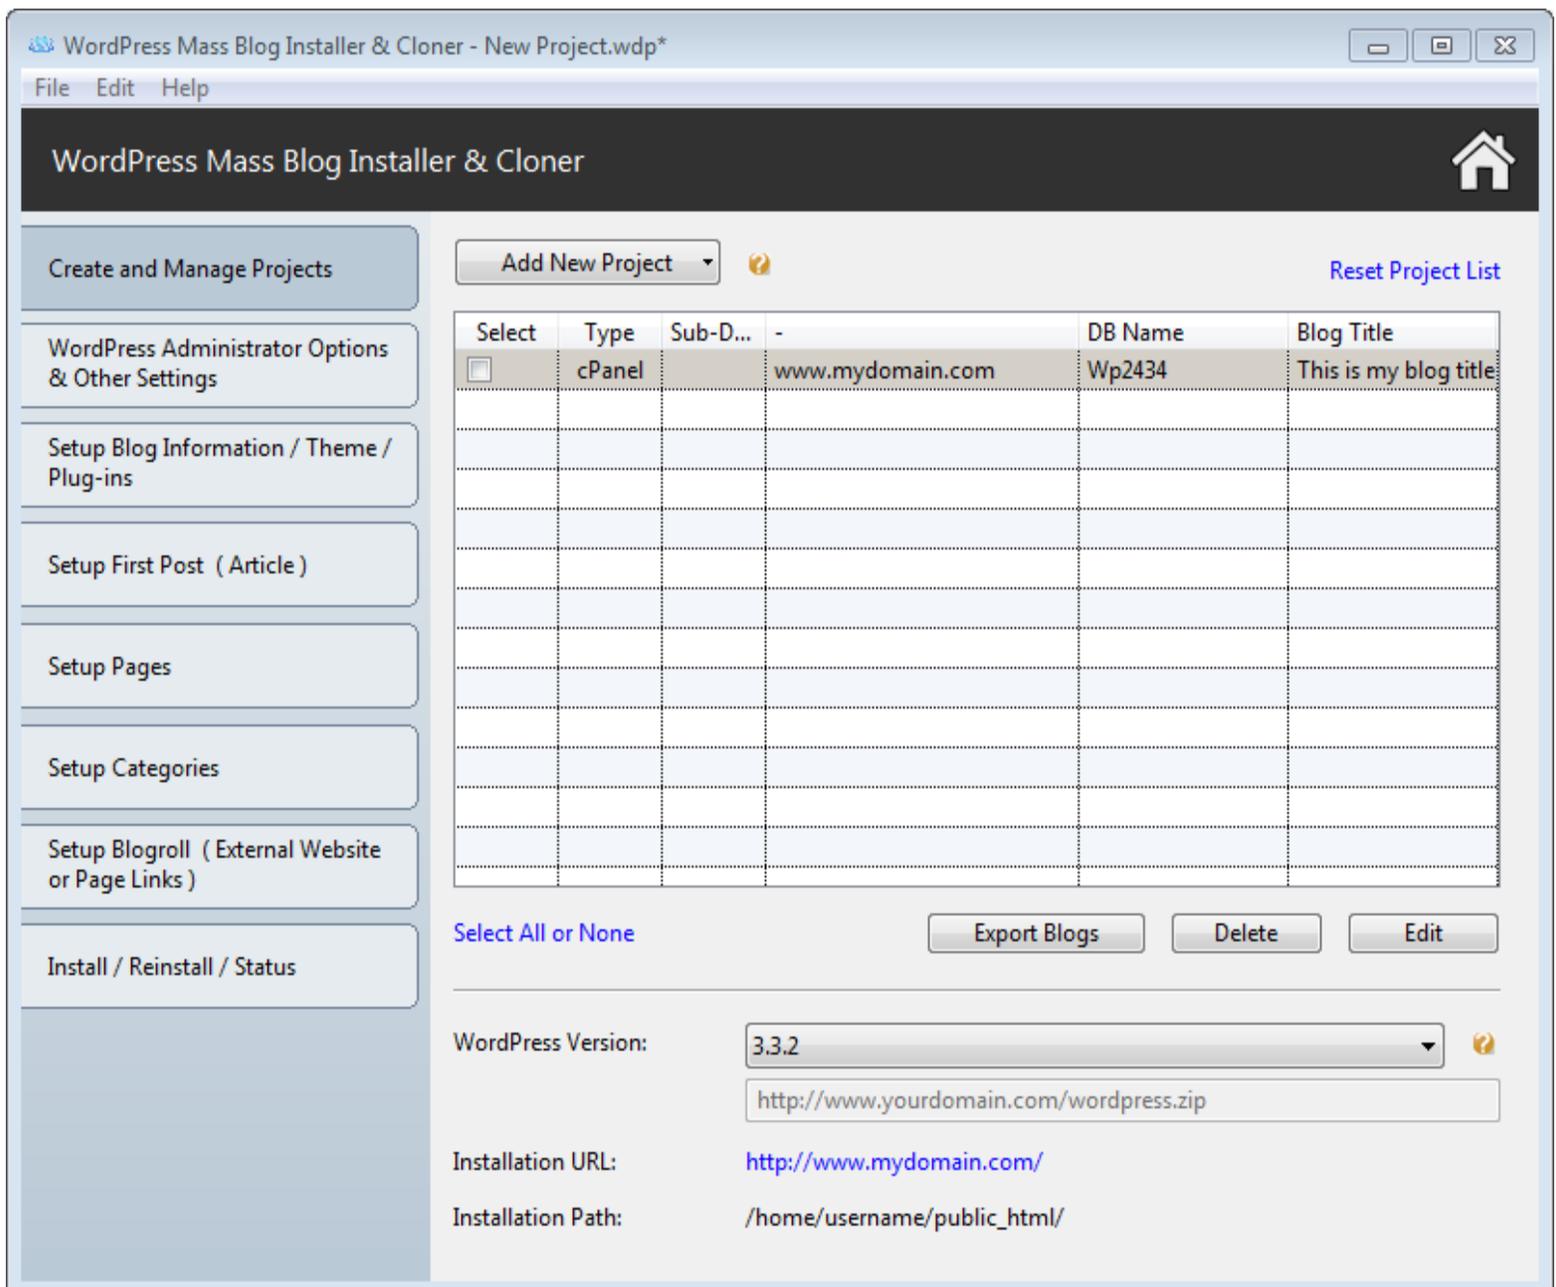

3. Enter the name of your blog/site.

4. If you intend to use only one database, then tick the box of "Single DB".

5. Click on "Insert and Finish" button.

6. You can leave WordPress Versions option at the latest or if you want an earlier version, choose the correct option.

Now setup your blog information:

7. Enter a Tagline. In a few words, explain what your site is about. Your site's slogan, or tagline, might be entered here. A tagline is short phrase, or sentence, used to convey the essence of the site and is often funny or eye-catching.

8. Enter the e-mail address to which you want WordPress to send messages regarding the administration and maintenance of your WordPress site. The e-mail address you enter here will never be displayed on the site.

9. Enter WordPress Administrator Login and Password. The admin account provides access to the [WordPress Administration Panel](#). The Administration Panel provides access to the control features of your WordPress installation.

» WordPress Mass Blog Installer & Cloner - How to Build and Use Custom WordPress (ZIP File) with your own customized files etc.

1. Download latest WordPress Version (zip) from: <http://wordpress.org/latest.zip>
2. After Unzip/Extract, add/replace your files, plug-ins and themes etc. inside the "wordpress" folder
3. Re-zip/Re-compress the wordpress folder to create your new Custom Build ZIP file (only zip format is supported)
4. Upload your newly Custom Build ZIP file "wordpress.zip" to your server (**Please upload to a different domain or sub-folder then installation folder**)
5. Enter the complete URL e.g. <http://www.yourdomain.com/wordpress.zip> to your Custom Build ZIP file in the box starting with http://

» WordPress Mass Blog Installer & Cloner - How To Clone / Duplicate / Migrate Your Pre-Installed and Fully Configured WordPress Blog to a New Domain(s)/Sub-Domain/Sub-Folder etc.

Automatic

1. Upload "create_masterblog_zip.php" file from the software folder to your Master Blog folder using FTP Client.

Please Note: Before uploading "create_masterblog_zip.php" change the default password which is "MyPass123" and you can leave this file on the server for regular backups etc.

2. Browse URL to "http://myblog.com/create_masterblog_zip.php" file from your PC Browser, once it's finished.

3. Simply copy/paste or enter the complete URL to the Master Blog (zip) file in the box starting with http://

Manual

1. Create a new folder "wordpress" on your computer

2. Download all the files and folders of your Master Blog using an FTP Client into a newly created wordpress folder

3. Export Master Blog Database on your computer using phpMyAdmin (only SQL format is supported)

4. Rename newly downloaded database SQL filename to "masterblog.sql"

5. Copy new masterblog.sql into wordpress folder

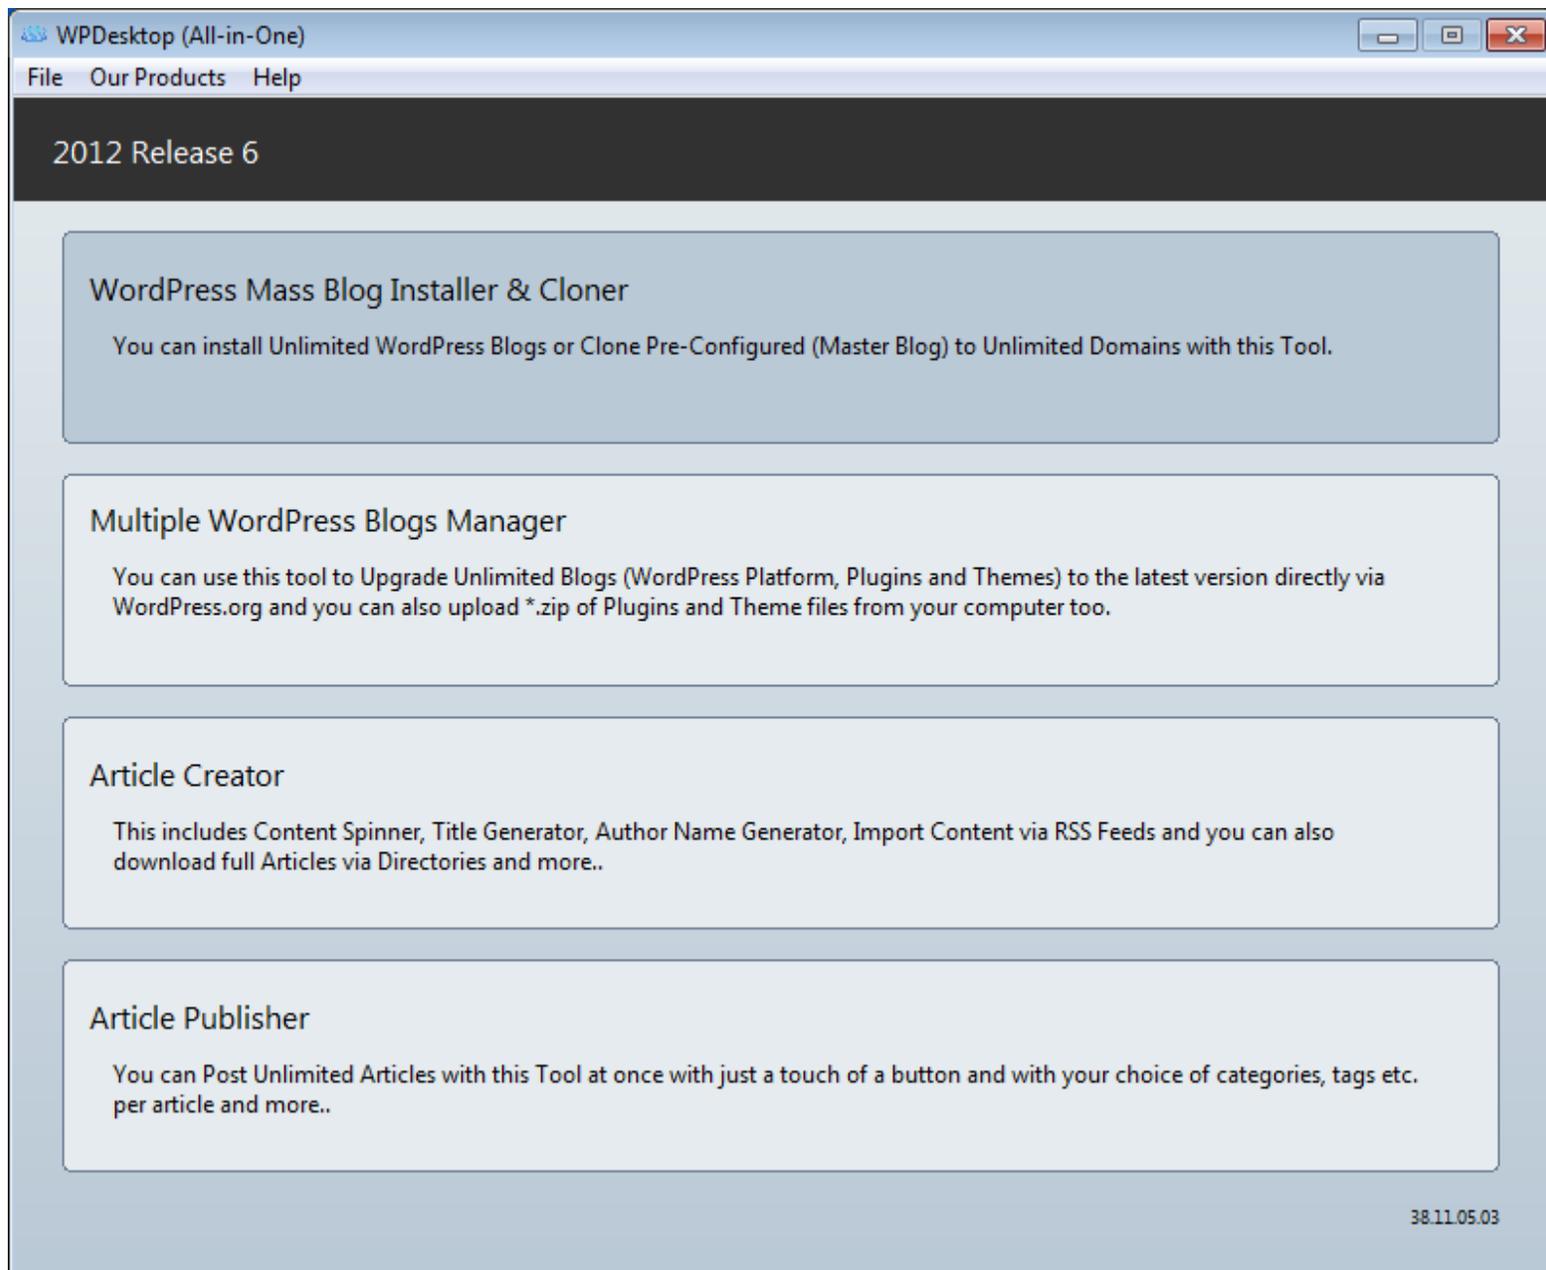

6. Zip/Compress this wordpress folder to create your new Master Blog ZIP file (only zip format is supported)

7. Upload your newly Master Blog ZIP file "wordpress.zip" to your server (**Please upload to a different domain or sub-folder then installation folder**)

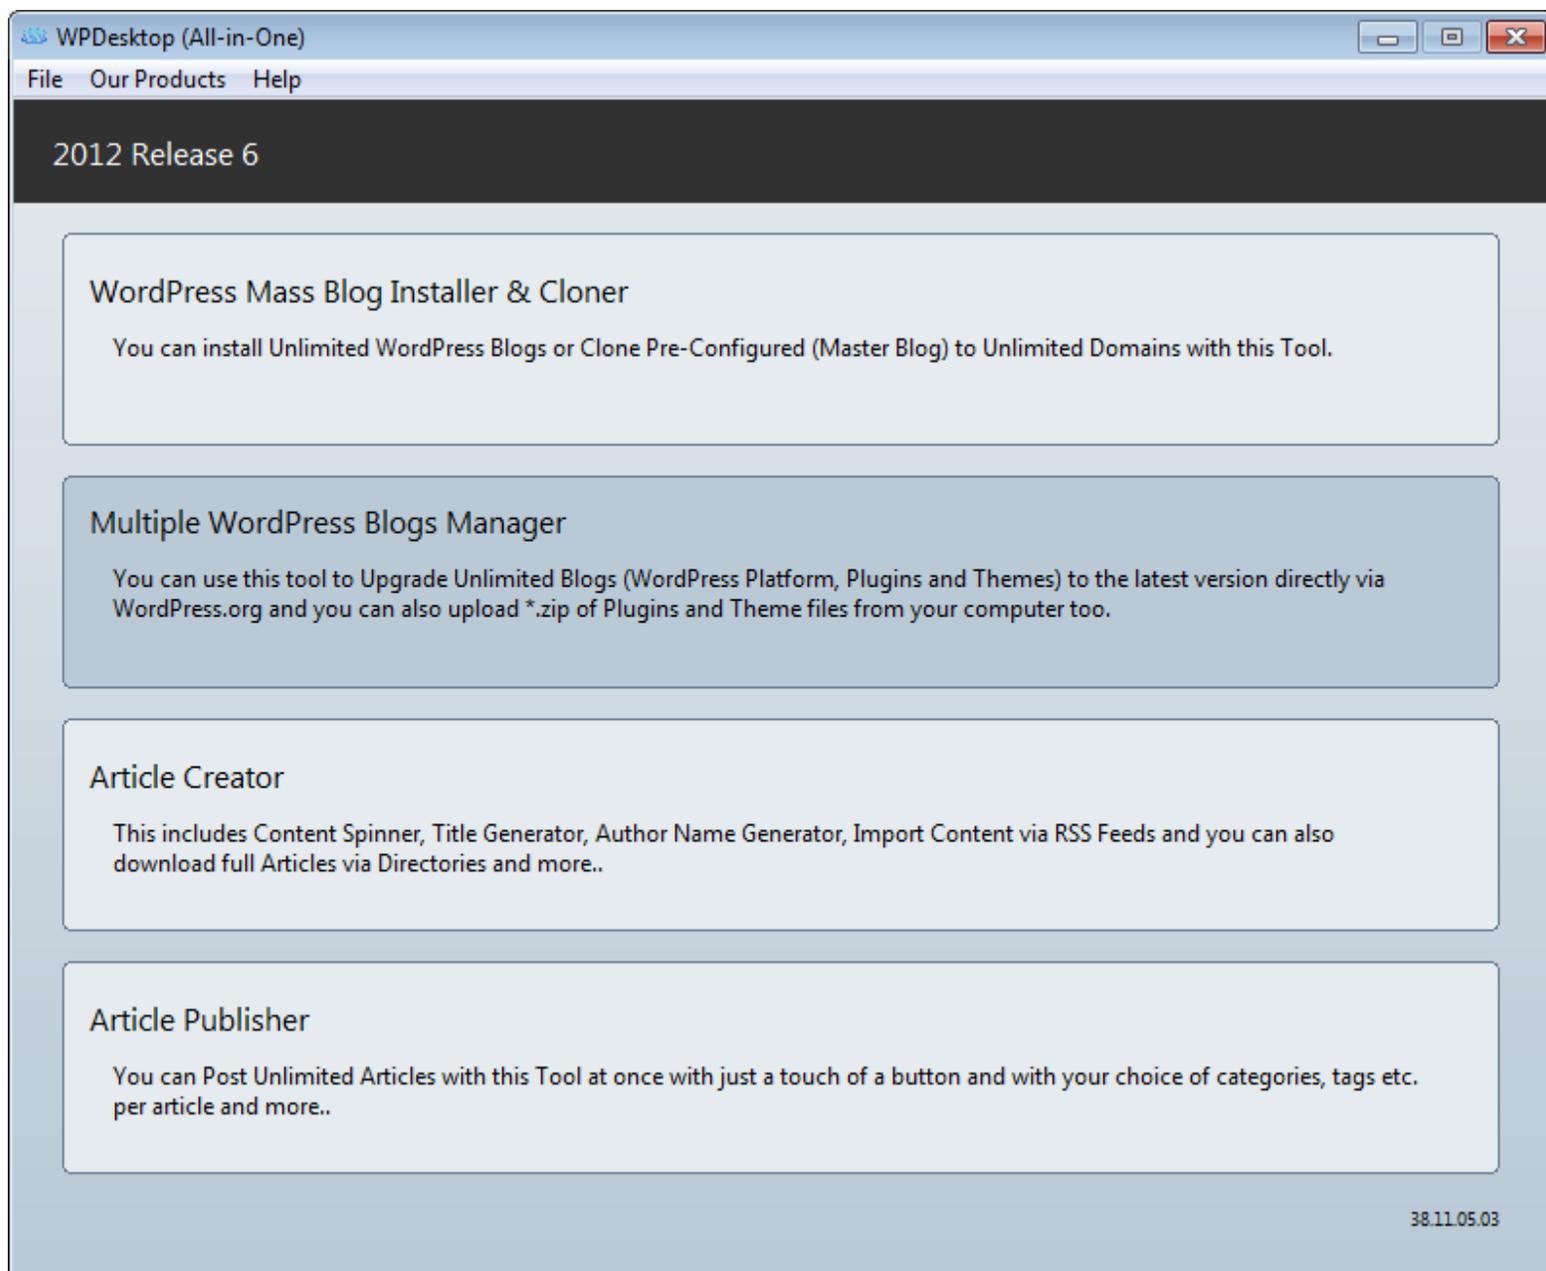

8. Enter the complete URL e.g. http://www.yourdomain.com/wordpress.zip to your Master Blog (zip) file in the box starting with http://

Article Title Generator

The screenshot shows the 'Article Creator' application window. The title bar includes the application name and standard window controls. The menu bar contains 'File', 'Edit', and 'Help'. The main interface has a dark header with the application name and a home icon. On the left, there is a sidebar with three buttons: 'Content Spinner', 'Title Generator', and 'Author Name Generator'. The main area contains a 'Keyword' field with 'wordpress', a 'Letter Case' dropdown menu, and a 'Generate' button. Below these is a scrollable list of 15 article titles related to WordPress.

The screenshot shows a software window titled "WPDesktop (All-in-One)" with a menu bar containing "File", "Our Products", and "Help". Below the menu bar, a dark header displays "2012 Release 6". The main content area is divided into four light-colored boxes, each containing a product name and a brief description:

- WordPress Mass Blog Installer & Cloner**
You can install Unlimited WordPress Blogs or Clone Pre-Configured (Master Blog) to Unlimited Domains with this Tool.
- Multiple WordPress Blogs Manager**
You can use this tool to Upgrade Unlimited Blogs (WordPress Platform, Plugins and Themes) to the latest version directly via WordPress.org and you can also upload *.zip of Plugins and Theme files from your computer too.
- Article Creator**
This includes Content Spinner, Title Generator, Author Name Generator, Import Content via RSS Feeds and you can also download full Articles via Directories and more..
- Article Publisher**
You can Post Unlimited Articles with this Tool at once with just a touch of a button and with your choice of categories, tags etc. per article and more..

In the bottom right corner of the window, the version number "38.11.05.03" is displayed.

In the last decade, computers have invaded every aspect of education, from strangers they have "met" on the Web. Computer literacy is a reality for many. In the midst of this technological explosion, we might well stop and ask some questions. In the debate over the virtues of computers in education, the technological optimists sing a siren song of an enchanted new land where conversations with experts on any subject around the world. No longer will s
